

## Vesicular Stomatitis 2014-2015

### Situation Report – January 23, 2014

Information Current as of 5:00 pm MDT, January 22, 2014

(Updated information listed in blue ink)

#### New Information

**Since the last situation report on January 16, 2015, no new confirmed VSV-positive premises have been identified.**

**To date, a total of four hundred thirty-four (434) VSV-positive premises (New Jersey serotype) have been confirmed in four U.S. states; Arizona (1 premises), Colorado (370 premises), Nebraska (1 premises), and Texas (62 premises).** There has been 1 county affected in Arizona (Santa Cruz), 17 counties affected in Colorado (Adams, Arapahoe, Boulder, Broomfield, Douglas, Elbert, El Paso, Fremont, Huerfano, Jefferson, Larimer, Logan, Morgan, Otero, Pueblo, Sedgwick, and Weld Counties), 1 county affected in Nebraska (Wheeler County), and 13 counties affected in Texas (Bastrop, Falls, Guadalupe, Hidalgo, Jim Wells, Kinney, Lee, McLennan, Nueces, San Patricio, Travis, Val Verde, and Williamson Counties).

Of the 434 total VSV-positive premises, 404 have been positive equine premises, 27 have been positive bovine premises, and 3 premises have had both cattle and horses positive.

Positive premises are eligible for quarantine release 21 days after lesions have healed in all affected animals. To date, **three hundred sixty-six (366)** premises in Colorado have been released from quarantine and there are an additional **three (3)** premises in Colorado on 21-day countdown to quarantine release. As of October 13, 2014, all confirmed VSV-positive premises in Texas were released from quarantine. As of December 22, 2014, all confirmed VSV-positive premises in Nebraska were released from quarantine. There are currently **five (5)** confirmed VSV-positive premises under quarantine; **four (4)** in Colorado and one (1) in Arizona.

#### Map Information

See adjoining maps for current and cumulative positive premises information

#### Current: Counties with Positive Premises Remaining Under Quarantine

**Note: Does NOT include data from premises already released from quarantine. See Cumulative information section.**

STATE	COUNTY	PREMISES
Arizona	Santa Cruz	<b>1</b>
Colorado	Adams	<b>1</b>
	El Paso	<b>1</b>
	Otero	<b>2</b>
<b>TOTAL</b>	<b>4</b>	<b>5</b>

### Current Statistics for Premises Remaining Under Quarantine

**Note: Does NOT include data from premises already released from quarantine. See Cumulative Statistics.**

<b>Current Positive Premises</b>	<b>Arizona</b>	<b>Colorado</b>	<b>Nebraska</b>	<b>Texas</b>	<b>Total</b>
Current Positive Premises Under Quarantine	1	4	0	0	5
Premises on 21-day Countdown to Quarantine Removal	0	3	0	0	3
Current Counties with Positive Premises	1	3	0	0	4

<b>Current Positive Species</b>	<b>Arizona</b>	<b>Colorado</b>	<b>Nebraska</b>	<b>Texas</b>	<b>Total</b>

\*Cumulative susceptible species counts include positive cases.

**Background Information**

On May 23, 2014, the National Veterinary Services Laboratories (NVSL) in Ames, Iowa, confirmed a finding of vesicular stomatitis virus (VSV) infection (New Jersey serotype) on an equine premises in Kinney County, Texas. Four affected horses on the premises met the case definition of infection with compatible clinical signs and either virus isolation or positive complement fixation antibody titers. This was the 2014 VSV index case for the nation.

On July 17, 2014, the National Veterinary Services Laboratories in Ames, Iowa, confirmed findings of vesicular stomatitis virus (VSV) infection (New Jersey serotype) on two (2) equine premises in Weld County, Colorado. These were the index cases for Colorado. Three affected horses on one premises and one affected horse on the other premises met the case definition of VSV infection with compatible clinical signs and either positive complement fixation antibody

titers or positive virus isolation.

On October 13, 2014, the last confirmed VSV-positive premises in Texas was released from quarantine.

On November 22, 2014, the National Veterinary Services Laboratories' Foreign Animal Disease Diagnostic Laboratory on Plum Island, NY confirmed a finding of vesicular stomatitis virus (VSV) infection (New Jersey serotype) on a bovine premises in Wheeler County, Nebraska. Three (3) head of cattle on the premises met the case definition of infection with compatible clinical signs and positive complement fixation antibody titers. This is the 2014 VSV index case for Nebraska. A second epidemiologically-linked bovine premises in Wheeler County, NE also had cattle showing clinical signs and was managed as a presumptive positive premises.

On December 22, 2014, the last confirmed VSV-positive premises in Nebraska was released from quarantine.

On January 6, 2015, the National Veterinary Services Laboratories in Ames, Iowa confirmed a finding of vesicular stomatitis virus (VSV) infection (New Jersey serotype) on an equine premises in Santa Cruz County, Arizona. Two (2) horses on the premises met the case definition of VSV infection with compatible clinical signs and positive complement fixation antibody titers. This is the 2014-2015 VSV index case for Arizona.
