

Vesicular Stomatitis 2014
Situation Report – October 15, 2014
Information Current as of 5:00 pm MDT, October 14, 2014
(Updated information listed in blue ink)

New Information

Since the last situation report (10/8/2014), a total of **six (6)** new VSV-positive premises (New Jersey serotype) have been confirmed in Colorado; **five (5)** new positive equine premises and **one (1) new positive bovine premises (a dairy)**. There have been no new VSV-positive premises identified in Texas and, as of 10/13/14, **all confirmed positive VSV premises in Texas have been released from quarantine**.

Horses and cattle were newly confirmed VSV-positive by compatible clinical signs and either complement fixation test (CFT) antibody titer or virus isolation in the following counties:

Colorado

[El Paso County, Colorado- 2 horses on 1 premises](#)

[Fremont County, Colorado – 1 horse on 1 premises](#)

[Logan County, Colorado – 4 horses on 1 premises](#)

[Morgan County, Colorado – 1 cow on 1 premises \(dairy\)](#)

[Pueblo County, Colorado – 2 horses on 2 premises](#)

To date, a total of [three hundred eighty-eight \(388\)](#) VSV-positive premises have been identified in two U.S. states, Colorado ([326 premises](#)) and Texas ([62 premises](#)). There have been 14 counties affected in Colorado (Adams, Arapahoe, Boulder, Broomfield, Douglas, El Paso, Fremont, Jefferson, Larimer, Logan, Morgan, Otero, Pueblo, and Weld Counties) and 13 counties affected in Texas (Bastrop, Falls, Guadalupe, Hidalgo, Jim Wells, Kinney, Lee, McLennan, Nueces, San Patricio, Travis, Val Verde, and Williamson Counties). Of the [388](#) total VSV-positive premises, [370](#) have been positive equine premises, [16](#) have been positive bovine premises, and 2 premises have had both cattle and horses positive.

Positive premises are eligible for quarantine release 21 days after lesions have healed in all affected animals. To date, [two hundred sixty-one \(261\)](#) premises in Colorado have been released from quarantine and there are an additional [forty-one \(41\)](#) premises in Colorado on 21-day countdown to quarantine release. [As of October 13, 2014, all confirmed VSV-positive premises in Texas have been released from quarantine.](#)

Map Information

See adjoining maps for current and cumulative positive premises information.

Current: Counties with Positive Premises Remaining Under Quarantine

Note: Does NOT include data from premises already released from quarantine. See Cumulative information section.

STATE	COUNTY	PREMISES
Colorado	Adams	1
	Arapahoe	1
	Boulder	3
	Broomfield	1
	Douglas	1
	El Paso	1
	Fremont	4
	Jefferson	5
	Larimer	15
	Logan	1
	Morgan	2
	Otero	2
	Pueblo	18
	Weld	10
TOTAL	14	65

Current Statistics for Premises Remaining Under Quarantine

Note: Does NOT include data from premises already released from quarantine. See Cumulative Statistics.

Current Positive Premises	Colorado	Texas	Total
Current Positive Premises Under Quarantine	65	0	65
Premises on 21-day Countdown to Quarantine Removal	41	0	41
Current Counties with Positive Premises	14	0	14

Current Positive Species	Colorado	Texas	Total
Positive Equine Species	98	0	98
Positive Bovine Species	11	0	11

Total Susceptible Animals	8956	2715	11671

*Cumulative susceptible species counts include positive cases.

Background Information

On May 23, 2014, the National Veterinary Services Laboratories (NVSL) in Ames, Iowa, confirmed a finding of vesicular stomatitis virus (VSV) infection (New Jersey serotype) on an equine premises in Kinney County, Texas. Four affected horses on the premises met the case definition of infection with compatible clinical signs and either virus isolation or positive complement fixation antibody titers. This was the 2014 VSV index case for the nation.

On July 17, 2014, the National Veterinary Services Laboratories in Ames, Iowa, confirmed findings of vesicular stomatitis virus (VSV) infection (New Jersey serotype) on two (2) equine premises in Weld County, Colorado. These were the index cases for Colorado. Three affected horses on one premises and one affected horse on the other premises met the case definition of VSV infection with compatible clinical signs and either positive complement fixation antibody titers or positive virus isolation.
