

POTENTIAL DISINFECTANTS TO USE AGAINST *MYCOBACTERIUM SPP.* IN FARM SETTINGS

This table summarizes information found in the National Pesticide Information Retrieval System (NPIRS®)¹ and is meant to assist persons in finding U.S. Environmental Protection Agency (EPA)-registered disinfectants that may be used against *Mycobacterium spp.* in farm settings, as permitted under the Federally-approved product label. The inclusion of any product on this table does not imply endorsement of the product by the United States Department of Agriculture (USDA) Animal and Plant Health Inspection Service (APHIS) Veterinary Services (VS). This list may not be all-inclusive.

Disinfectants must be used according to the label appearing on the product container. The information obtained from NPIRS® and summarized in the table below, is consistent with EPA-registered labels, which can be found on EPA's Pesticide Product Label System (PPLS)² at [Pesticide Product and Label System | US EPA](#). EPA-registered labels are often identical to the labels appearing on the container; however, states may approve alternative language. Please use the below table as a first step to identifying a potential EPA-registered product to use against *Mycobacterium spp.*, then locate the appropriate container label within the appropriate state at the following website [NPIRS - National Pesticide Information Retrieval System](#).

Applicable pests and use sites must be specified on the product label unless the product is being used as permitted by the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) section 2(ee)(2)³, in which case the product must be used according to all label indications with the exception that the targeted pests (microbes) need not be specified. Under FIFRA section 2(ee)(2), applicators may apply disinfectant products listed in the following table for use against any *Mycobacterium spp.*, provided that the applicable use sites (e.g., farm, dairy, poultry, and livestock premises and related structures and equipment) appear on the product label and that the applicator follows all applicable label use directions and safety precautions.

NPIRS® database indicates there are numerous disinfectants currently registered by EPA for use against "*Mycobacterium spp.*". In most cases, per the product label, the product is actually only approved for one specific species of *Mycobacterium* (e.g., *Mycobacterium bovis*, previously named *M. tuberculosis var. bovis*, or *M. tuberculosis*). However, various product labels make a general claim that the product is tuberculocidal. According to FIFRA 2(ee)(2), any *Mycobacterium spp.* product may be used, provided all label indications are observed.

¹ The National Pesticide Information Retrieval System (NPIRS®) is a collection of pesticide-related databases, applications, and web sites under the administration of the Center for Environmental and Regulatory Information Systems (CERIS) at Purdue University, West Lafayette, Indiana. The NPIRS® obtains product information on a monthly basis from the EPA Pesticide Product Information System (PPIS) website. This PPIS information, including registered use sites and pests listed on the EPA stamped approved label, is disseminated through the NPIRS® member and public websites and is provided for informational purposes only. Information derived from the NPIRS® does not constitute a label replacement or a recommendation. Before applying any pesticide, applicators must determine if the product under consideration is correct for the intended use site. Always check the container/package label to determine if the intended use site is included on the label. Read and follow label instructions before using any pesticide product. More information on the NPIRS® can be found at [NPIRS - National Pesticide Information Retrieval System](#). Errors in the PPIS data can be reported at this website using the Data Quality menu option.

² To access the most recently approved product labels, see EPA's Pesticide Product Label System (PPLS) site at: [Pesticide Product and Label System | US EPA](#). The pesticide product's EPA registration number or product name can be used to access the product label in PPLS. Press "search." A list of EPA-approved labels will appear in chronological order, with the most recent label appearing first.

³ FIFRA section 2(ee)(2): "TO USE ANY REGISTERED PESTICIDE IN A MANNER INCONSISTENT WITH ITS LABELING.— The term 'to use any registered pesticide in a manner inconsistent with its labeling means to use any registered pesticide in a manner not permitted by the labeling, except that the term shall not include ... (2) applying a pesticide against any target pest not specified on the labeling if the application is to the crop, animal, or site specified on the labeling, unless the Administrator has required that the labeling specifically state that the pesticide may be used only for the pests specified on the labeling after the Administrator has determined that the use of the pesticide against other pests would cause an unreasonable adverse effect on the environment, ..."
