REPORT OF ANIMALS USED BY OR UNDER CONTROL OF RESEARCH FACILITY (Attach additional sheets if necessary or use APHIS FORM 7023A)

A. Animals Covered By The Animal Welfare Regulations	B. Number of animals being bred, conditioned, or held for use in teaching, testing, experiments, research, or surgery but not yet used for such purposes.	C. Number of animals upon which teaching, research, experiments, or tests were conducted involving no pain, distress, or use of pain-relieving drugs.	D. Number of animals upon which experiments, teaching, research, surgery, or tests were conducted involving accompanying pain or distress to the animals and for which appropriate anesthetic, analgesic, or tranquilizing drugs were used.	E. Number of animals upon which teaching, experiments, research, surgery or tests were conducted involving accompanying pain or distress to the animals and for which the use of appropriate anesthetic, analgesic, or tranquilizing drugs would have adversely affected the procedures, results, or interpretation of the teaching, research, experiments, surgery, or tests. (An explanation of the procedures producing pain or distress in these animals and the reasons such drugs were not used must be attached to this report).	F. TOTAL NO. OF ANIMALS (Cols. C + D + E)
4. Dogs					
5. Cats					
6. Guinea Pigs					
7. Hamsters					
8. Rabbits		152		16	168
9. Non-human Primates					
10. Sheep					
11. Pigs			5		5
12. Other Farm Animals					
13. Other Animals					

ASSURANCE STATEMENTS

- 1) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- 2) Each principal investigator has considered alternatives to painful procedures.
- 3) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4) The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

2000 Annual Report to USDA**

Supplementary Information on Animals Assigned to Category E

RTI conducted a range-finding study for a compound being tested for developmental toxicity for a government client. No previous studies were found in the literature for this compound applied topically (the route of exposure to humans) in animal models.

Six doses were employed in the dose range-finding study administered topically to pregnant rabbits from gestational day (gd) six through 29 with eight does assigned to each dose group. The protocol stated that if 50% (four) or more does in a given dose group died or were euthanized moribund, the remaining does in that group would be euthanized.

Seven does in the high dose group were found dead or sacrificed moribund on gd 10 due to the toxicity of the compound and the remaining three were euthanized due to excess mortality in that group. One doe in the next to the high dose group was found dead and four were sacrificed moribund by gestational day 11; therefore, the remaining does were euthanized due to excess mortality in that group. Four does in the mid-dose group were found dead by gestational day 14 and the remaining four does were euthanized due to excess mortality in that group.

No adverse toxic effects of the test chemical were seen in any does in the definitive study conducted in two replicates with 120 total females assigned to five dose groups (24 per group), and doses below the top three dose levels employed in the range-finding study.

REPORT OF ANIMALS USED BY OR UNDER CONTROL OF RESEARCH FACILITY (Attach additional sheets if necessary or use APHIS FORM 7023A)

A. Animals Covered By The Animal Welfare Regulations	B. Number of animals being bred, conditioned, or held for use in teaching, testing, experiments, research, or surgery but not yet used for such purposes.	C. Number of animals upon which teaching, research, experiments, or tests were conducted involving no pain, distress, or use of pain-relieving drugs.	D. Number of animals upon which experiments, teaching, research, surgery, or tests were conducted involving accompanying pain or distress to the animals and for which appropriate anesthetic, analgesic, or tranquilizing drugs were used.	E. Number of animals upon which teaching, experiments, research, surgery or tests were conducted involving accompanying pain or distress to the animals and for which the use of appropriate anesthetic, analgesic, or tranquilizing drugs would have adversely affected the procedures, results, or interpretation of the teaching, research, experiments, surgery, or tests (An explanation of the procedures producing pain or distress in these animals and the reasons such drugs were not used must be attached to this report).	F. TOTAL NO OF ANIMALS (Cols. C + D + E)
4. Dogs					
5. Cats					
6. Guinea Pigs					
7. Hamsters					
8. Rabbits					
9. Non-human Primates					
10. Sheep					
11. Pigs					
12. Other Farm Animals					
13. Other Animals					

ASSURANCE STATEMENTS

- 1) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- 2) Each principal investigator has considered alternatives to painful procedures.
- 3) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4) The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

Optional Column E Explanation Form

This form is intended as an aid to completing the Column E explanation. It is not an official form and its use is voluntary. Name, addresses, protocols, veterinary care programs, and the like, are not required as part of an explanation. A Column E explanation must be written so as to be understood by lay persons as well as scientists.

1. Registration Number: 55-R-0005
2. Number 24 of animals used in this study
3. Species (common name) pigs of animals used in this study
4. Explain the procedure producing pain and/or distress.

The goal of this study is to produce a vaccine against the porcine reproductive and respiratory syndrome virus (PRRSV). To determine if a vaccine is effective, it is necessary to use a model of the disease. Animals are vaccinated, and then infected and the severity of their symptoms compared with unvaccinated animals. In these experiments, a dose of PRRSV was injected to produce a mild disease. The piglets experienced fever, loss of appetite, listlessness and depression for a period of 3-7 days. After this time period the symptoms disappeared and the animals' health returned.

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results (For Federally mandated testing, see question 6 below)

Providing medicines to relieve pain and/or distress would prevent us from observing the effects of the virus in unvaccinated animals. As a result, we would be unable to determine the effectiveness of our vaccine. We arrived at this conclusion by reviewing the scientific literature on PRRSV and the action of analgesic medicines.

6. What, if any, Federal regulations require this procedure? Cite the agency, the Code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):

Agency _____ CFR _____

Optional Column E Explanation Form

This form is intended as an aid to completing the Column E explanation. It is not an official form and its use is voluntary. Name, addresses, protocols, veterinary care programs, and the like, are not required as part of an explanation. A Column E explanation must be written so as to be understood by lay persons as well as scientists.

1. Registration Number: 55-R-0005
2. Number ²³ 23 of animals used in this study
3. Species (common name) Neonatal Calves of animals used in this study
4. Explain the procedure producing pain and/or distress.

Neonatal calves are orally inoculated with 10 oocysts of Cryptosporidium parvum in order to produce a mild diarrhea to study specific treatments to enhance repair of the intestinal damage done by this organism.

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results (For Federally mandated testing, see question 6 below)

C. parvum is the most common cause of diarrhea in the neonatal bovine worldwide and is a major cause of mortality in young calves. In order to evaluate the affects of our treatments in reducing diarrhea and the damage to ileal tissue, no therapeutic agents should be given to the animal to alleviate pain, which if present, is minimal. This would obscure the purpose of this study by altering the disease state significantly and may in fact increase the severity of the disease.

6. What, if any, Federal regulations require this procedure? Cite the agency, the Code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):

Agency _____ CFR _____

Optional Column E Explanation Form

This form is intended as an aid to completing the Column E explanation. It is not an official form and its use is voluntary. Name, addresses, protocols, veterinary care programs, and the like, are not required as part of an explanation. A Column E explanation must be written so as to be understood by lay persons as well as scientists.

1. Registration Number: 55-R-0005

2. Number 42 of animals used in this study

3. Species (common name) pigs of animals used in this study

4. Explain the procedure producing pain and/or distress. PIGS THAT HAD + HAD NOT BEEN VACCINATED WITH MODIFIED PORCINE RESPIRATORY AND REPRODUCTIVE SYNDROME VIRUS WERE INFECTED WITH VIRULENT PORCINE RESPIRATORY AND REPRODUCTIVE SYNDROME VIRUS.

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results (For Federally mandated testing, see question 6 below)

POTENTIALLY, NON-VACCINATED PIGS INFECTED WITH VIRULENT VIRUS CAN DEVELOP MILDLY TO MODERATELY ELEVATED TEMPERATURES AND HAVE DECREASED APPETITES FOR 2 TO 3 DAYS, WHICH IS THE HUMAN EQUIVALENT OF MILD TO MODERATE FLU. DAILY BODY TEMPERATURES + OBSERVANCE OF EATING HABITS INDICATED THESE PIGS WERE NOT ADVERSELY AFFECTED BY THE VIRULENT VIRUS

6. What, if any, Federal regulations require this procedure? Cite the agency, the Code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):

Agency _____ CFR _____

Optional Column E Explanation Form

This form is intended as an aid to completing the Column E explanation. It is not an official form and its use is voluntary. Name, addresses, protocols, veterinary care programs, and the like, are not required as part of an explanation. A Column E explanation must be written so as to be understood by lay persons as well as scientists.

- 1. Registration Number: **55-R-0005**
- 2. Number Three of animals used in this study
- 3. Species (common name) Canine of animals used in this study
- 4. Explain the procedure producing pain and/or distress.

Affected puppies can only be identified by genetic testing. This requires 24-48 hours to accomplish. During that time affected puppies could suffer from hypoglycemia. This is unlikely given the fact that puppies are allowed to nurse and given supplemental feeding every 2 hours for the first week of life until genetic status is known and gene therapy can then be given.

- 5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results (For Federally mandated testing, see question 6 below)

① Hypoglycemia cannot be predicted until genetic status is known or until clinical signs are present. Once clinical signs, if any, are present, they are treated with supportive care (IV glucose/subq glucose) frequent feedings, special diet). With regard to test results, affected puppies (given gene therapy or not) require 2-3 hour fasting to document biochemical changes related to disease status (a fed sample would mask any changes).

- 6. What, if any, Federal regulations require this procedure? Cite the agency, the Code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):

Agency N/A CFR N/A

119 rabbits used for this study.

Procedure for producing pain and/or distress: Rabbits: Under proparacaine-induced topical anesthesia, one eye of rabbits will be intravitreally injected with a test reagent (LPS; 10-50 μ l) approximately 3 mm posterior to the limbus. The contralateral eye will receive an equal volume of the appropriate vehicle. Injections will be made with a 30-gauge needle attached to a glass Hamilton syringe. At the same time other compounds will be instilled or intravitreally injected (50 μ l). Animals will be monitored for evidence of inflammation at various time intervals with a slit lamp (scores based on iridal hyperemia and aqueous flare) to determine the appropriate time for termination. Animals will be terminated by exposure to a saturated CO₂ atmosphere, eyes removed, ocular fluids aspirated, and tissues processed for histologic/molecular analyses.

Scientific Justification why pain and/or distress could not be relieved: Use of opioid analgesics (or anti-inflammatory drugs such as corticosteroids and nonsteroidal drugs), either systemically or topically, might alter the course of the process we are studying. Interference of these analgesics with the results of the study would require the use of additional rabbits, as controls, to test the effects of analgesics on the study. Rabbits will be monitored daily and evaluated for any evidence of undue pain. A veterinary ophthalmologist and LAR will evaluate the rabbits for evidence of pain ranging from photophobia, blepharitis, blepharoeidema, blepharokeratoconjunctivitis, to anorexia. In the unlikely event that rabbits develop obvious ocular pain as determined by the veterinary ophthalmologist, they will be euthanized.

Number of pigs used in category E research from October 31, 1999 to September 30, 2000.

Number of animals used – 9

Species – pig

Procedure producing pain – animals were infected with a virus that causes diarrhea.

Justification – Animals used in this research provide a model simulation of humans infants and children infected with intestinal viruses, including third-world countries where medical interventions are minimal. The purpose of the work is to develop agents which speed recovery from the infection. The scientific method requires some control animals that do NOT receive the agents so that the efficacy of the agents can be assessed.

SIGNATURE OF C.E.O. OR INSTITUTIONAL OFFICIAL

NAME & TITLE OF C.E.O. OR INSTITUTIONAL OFFICIAL (Type or Print)

DATE SIGNED

30 NOV 2000

USDA Registration Number 55-R-026
Attachment to USDA Annual Report dated November 28, 2000
Explanation of Animals Listed in Column E of this Report

The 26 dogs listed in Column E for this reporting year are assigned to a study that involves transection of the cranial cruciate ligament. The purpose of the study is to create an inflammatory disease model, which will be used to test new compounds developed for the treatment of osteoarthritis. Even though analgesics are administered immediately post operatively these will be discontinued within 24 hours after the surgery. Administering analgesics may interfere with the disease course because pain level changes are associated with neurological and endocrinological changes that affect the inflammatory process. Administration of test compound begins at 4-7 days post op with dogs being placed in a structured exercise program (pre-acclimated prior to surgery) at 7 days post op.

The Veterinarians and IACUC feel that these dogs potentially experienced "more than slight or momentary pain or distress", as defined in the *Animal Welfare Act*. Even though additional analgesics are not provided, the dogs are monitored by the Veterinarian and the scientist for such clinical signs as weight loss, inappetance, inability or unwillingness to use the affected limb, etc. which would be indicative of a need to potentially euthanize a given dog.
