13. Other Animals					
Gerbils	0	45	1732	4405	6182

ASSURANCE STATEMENTS

- 1) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- 2) Each principal investigator has considered alternatives to painful procedures.
- 3) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4) The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and

ATTACHMENT TO ANNUAL REPORT OF RESEARCH FACILITY

For the period of October 1, 2001 through September 30, 2002

Category "E" Experimentation

**Eli Lilly and Company
Indianapolis, IN 46285**

Registration No. 32-R-003

Animals upon which experiments, research, or tests were conducted involving accompanying pain or distress to the animals and for which the use of appropriate anesthetic, analgesic, or tranquilizing drugs would have adversely affected the procedures, results, or interpretation of the teaching, research, experiments, surgery, or tests.

Species	Number of Animals	Explanation
Monkeys	2	Toxicology

These animals were used in the toxicological evaluation of a drug candidate. In this study the degree of toxicity was unexpectedly severe. Administration of analgesics or tranquilizers would have confounded interpretation of the experimental results and the monkey was euthanized. Despite careful study design, supportive care, and adjustments to study protocols, animals in toxicology studies used in the evaluation of new drug candidates may experience unanticipated events. U.S. and O.U.S. regulations and guidelines for animal studies to support human clinical trials, specifically 21 CFR 312.23 (a)(8)(ii) and ICH SF4, require these studies.

Dogs	16	Diabetes Research
------	----	-------------------

These dogs were used in studies of (b)(4) experimental compounds in development as potential therapies for diabetes. In the course of the experimentation, the dogs' basal blood sugar was measured at intervals over a total time course of thirty hours. The dogs were not fed for twelve hours prior to the experiment and for the duration of the experiment itself for a total time period of up to 31 hours. The dogs were under constant observation during the procedure, were given free access to water and their blood sugar was augmented by intravenous dextrose injections if needed. The animals did not show clinical indications of 'distress'. There are no alternative models or experimental paradigms that replace measurement of basal blood glucose levels in higher mammals over time. Pharmaceutical intervention with sedatives, tranquilizers or analgesics would have no effect on the animals' well being and would have invalidated the experimental objectives.

Dogs	46	Cardiovascular Research
------	----	-------------------------

These dogs were used in cardiovascular research to evaluate potential heart failure therapeutic agents for efficacy in a meaningful experimental model prior to committing the compound to human testing. Cardiovascular measurement devices and pacing electrodes are surgically implanted and congestive heart failure is induced. The dogs were treated with an experimental compound delivered orally, intramuscularly, subcutaneously or intravenously. Congestive heart failure potentially results in discomfort due to pulmonary congestion, peripheral edema, ascites, anorexia and decreased exercise tolerance. The dogs were euthanized if they exhibited severe clinical signs or prolonged anorexia. Clinical congestive heart failure is a necessary requirement of the model in order to test compounds for efficacy prior to human clinical studies. Only leading compounds from testing in lower species that are possible clinical candidates were evaluated in dogs.

Gerbils 4389 Neuroscience

These gerbils were used in studies of compounds that have shown positive results in *in vitro* screening tests and in studies for which other rodents cannot be used (b)(4) The animals were administered compounds and observed for overt behavioral changes involving neurological or motor deficits. Following the procedure, animals in distress were immediately euthanized. There were no alternative models or experimental paradigms available. Pharmaceutical intervention with sedatives, tranquilizers or analgesics would have invalidated the experimental objectives.

Gerbils 16 Neuroscience

These gerbils were used in analgesia screening. Gerbils are not routinely used for analgesia screens (b)(4) Each animal is only subjected to one of a number of different tests used to identify and define compound analgesic effects. All animals are immediately euthanized after testing. Pharmaceutical intervention with sedatives, tranquilizers or analgesics would have invalidated the experimental objectives.

Guinea Pigs 53 Inflammation

These guinea pigs were used in studies evaluating the induction and prevention of delayed type hypersensitivity reaction. Guinea pigs are sensitized to antigens by subdermal injections and given experimental compounds. Experimental animals did develop clinical signs other than dermal erythematous indurations at the site of injection. Animals were observed twice a day throughout the entire study. Analgesics or anti-inflammatory agents could not be given because they would have adversely affected the study.

ATTACHMENT TO ANNUAL REPORT OF RESEARCH FACILITY

For the period of October 1, 2001 through September 30, 2002

Exceptions to the Regulations and Standards**Eli Lilly and Company
Indianapolis, IN 46285****Registration No. 32-R-003**

1. Identify the IACUC approved exception to the standards

Withholding of food (but not water) from animals for a period in excess of 24 hours.
[Reference: 9 CFR3.54 (a)]

2. Describe the IACUC approved exception to the standards

Dogs:

These dogs were used in studies of (b)(4)

(b)(4) experimental compounds in development as potential therapies for diabetes. The compounds in question were intended to regulate blood sugar over longer periods of

(b)(4) In the course of the experimentation the dogs' basal blood sugar was measured at intervals over a total time course of thirty hours. The dogs were not fed for twelve hours prior to the experiment and for the duration of the experiment itself for a total time period of up to 30 hours. These activities were reviewed and approved by the Institutional Animal Care and Use Committee and were observed by the veterinary staff. The dogs were under constant observation during the procedure, were given free access to water and their blood sugar was augmented by intravenous dextrose injections if needed. The animals did not show clinical indications of 'distress'.

Re: Annual Report question # 3-Reporting Facility

We have housed no covered species this year. The animals that have been housed were held in the following facility rooms:

3088	3093
3089	3094
3090	3095
3091	3096
3092	3111

Experiments using non-covered species have been conducted in rooms:

3085	3111
3086	3123
3087	

8600 University Boulevard
Evansville, Indiana
47712
