Inspection  
Type: ROUTINE INSPECTION  
Date: OCT-30-2006**

**3.14 (a)(9)**

**PRIMARY ENCLOSURES USED TO TRANSPORT LIVE DOGS AND CATS.**

(9) The primary enclosure has a solid, leak-proof bottom or a removable, leak-proof collection tray under a slatted or mesh floor that prevents seepage of waste products, such as excreta and body fluids, outside of the enclosure. If a slatted or mesh floor is used in the enclosure, it must be designed and constructed so that the animal cannot put any part of its body between the slats or through the holes in the mesh.

\*\*\*\*The puppies are on mesh floors of 1" x 1" spaces. There are 2 enclosures with puppies that have small feet and the feet were observed to pass through the openings in the floor as it moved about the enclosure. The legs and feet of the dogs could be injured in passing through the mesh floor. For the health and well being of the dogs, if a slatted or mesh floor is used in the enclosure, it must be designed and constructed so that the animal cannot put any part of its body between the slats or through the holes in the mesh.

This affects 3 puppies.

TO BE CORRECTED WHEN TRANSPORTER ARRIVES AT THEIR HOME LOCATION.

NOTE: THIS INSPECTION WAS CONDUCTED AT A PICK-UP SITE IN WEST PLAINS, MO.
