

Introduction

This training is intended to provide practical examples to typical analytical problems in a real world setting.

The manual was designed by APHIS employees using the BRIO Insight program. The manual is evolving as we learn more about the program and the financial data warehouse.

The BRIO Insight software is an excellent tool for retrieving and analyzing our financial information. You must learn how to use it and practice with it to benefit from its full potential.

We encourage you to practice. You can not “hurt” the data in the Federal Data Warehouse (FDW) because BRIO only allows you read-only access. Go ahead, dig in!
