

# 2007 INDIANAPOLIS COOPERATIVE JAPANESE BEETLE PROGRAM

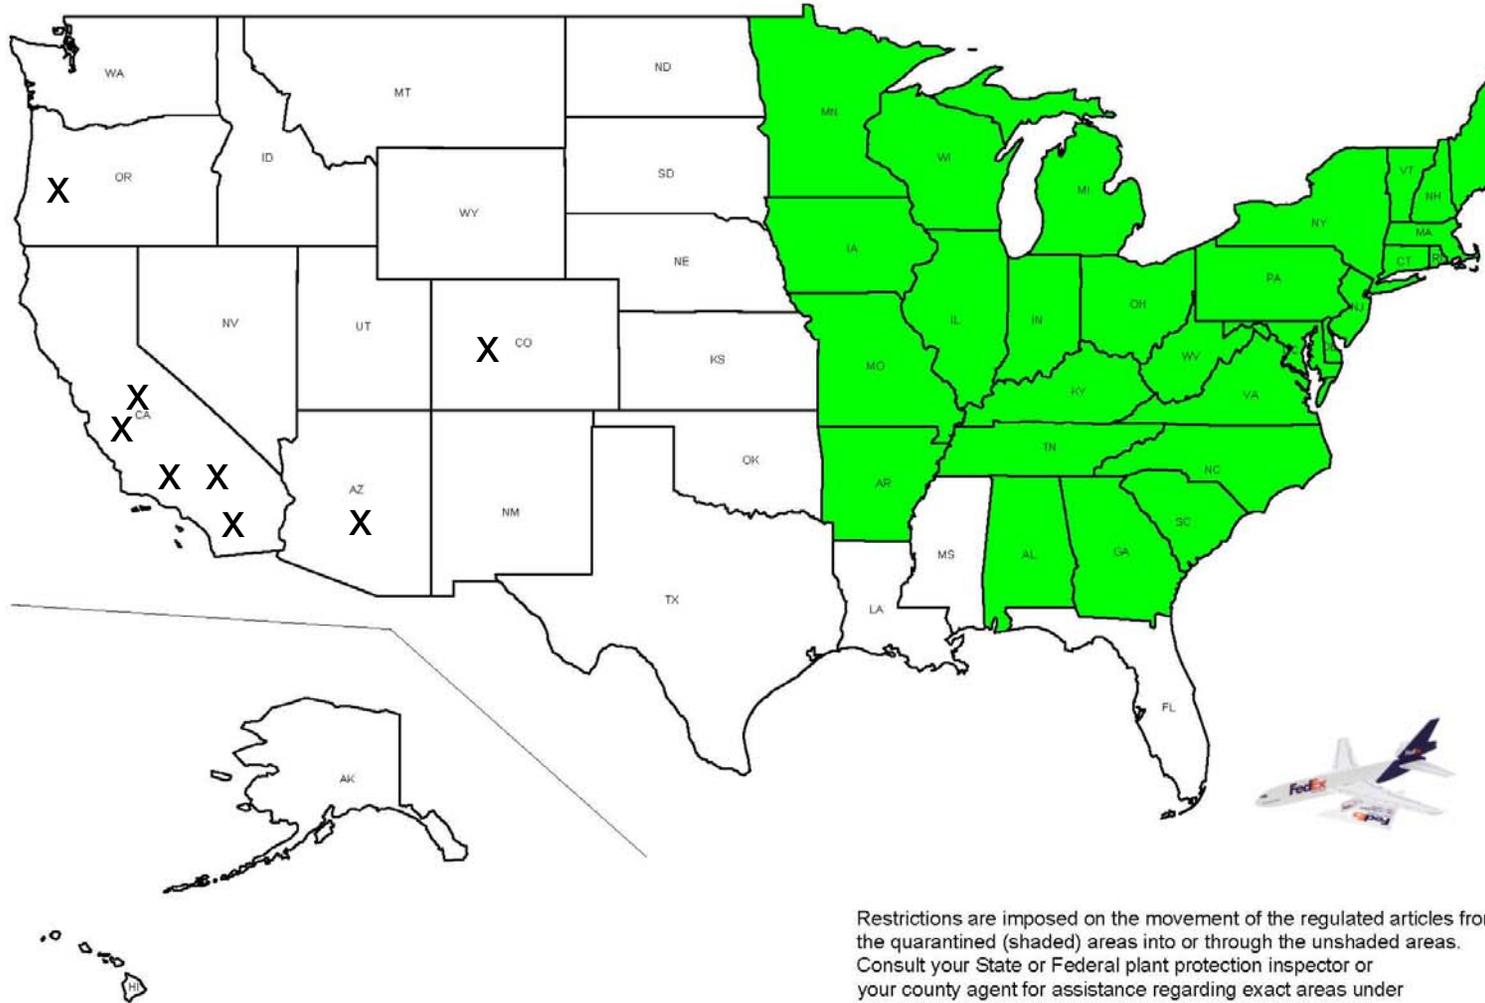

# Indianapolis JB Cooperative Program

## Goal:

- Not allow Japanese Beetles to hitchhike to the western Japanese beetle protected states on aircraft originating in Indianapolis.

## Japanese Beetle Regulated States

Restrictions are imposed on the movement of the regulated articles from the quarantined (shaded) areas into or through the unshaded areas. Consult your State or Federal plant protection inspector or your county agent for assistance regarding exact areas under regulation, and requirements for moving regulated articles. For detailed information, see 7 CFR 301.48 for quarantine and regulations.

# Components of the Indianapolis Cooperative JB Program

- FedEx
- Indianapolis Airport Authority
- FedEx Consultants
- USDA APHIS PPQ

# FedEx's Role

- Treat all regulated aircraft destined for Japanese beetle protected states.
- Treat all aircraft that will arrive in JB protected states within 48 hours of leaving Indianapolis.
- Use and maintain excluders to prevent Japanese beetles from entering aircraft.
- Use plastic monsoon covers
- Provide approximately 100% of the cost to safeguard aircraft against Japanese beetles.
- Invest in the knowledge of entomologists and pest control Consultants.

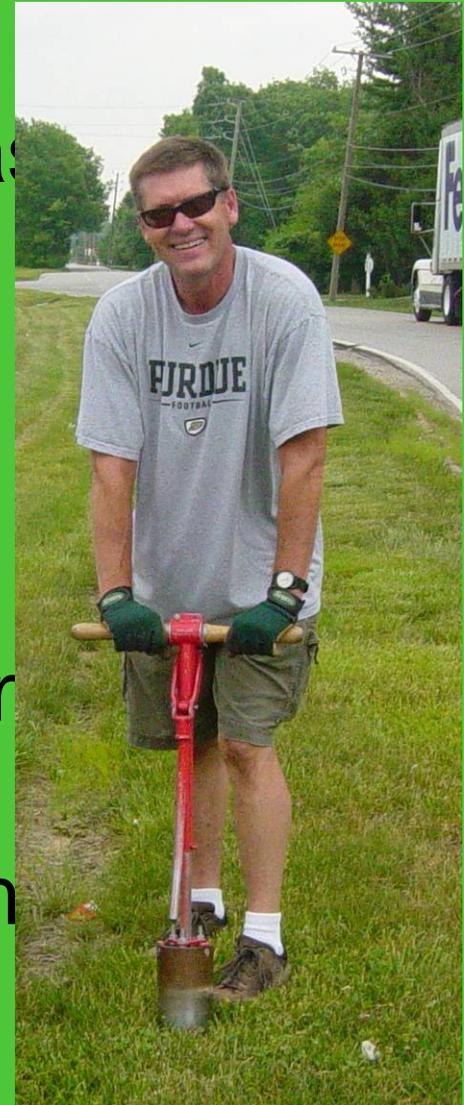

# Indianapolis Airport Authority's Role

- Manage the property around the airport.
- Only allow leased farm land near the airport to be planted in crops such as grain sorghum or switch grass instead of the Indiana standards of corn and soybeans.
- Treat JB host plant management around the airport.
- Treat hot spots and conduct regular surveys.
- Remove host plants from the airport.

# FedEx Consultants Role

- Provide valuable insight/pre-season planning.
- Assist with pre-season grub survey/identify grubs
- Provide safeguarding training.
- Train SIT team for applying Terro treatments.
- Troubleshoot/identify ways to improve cooperative program.

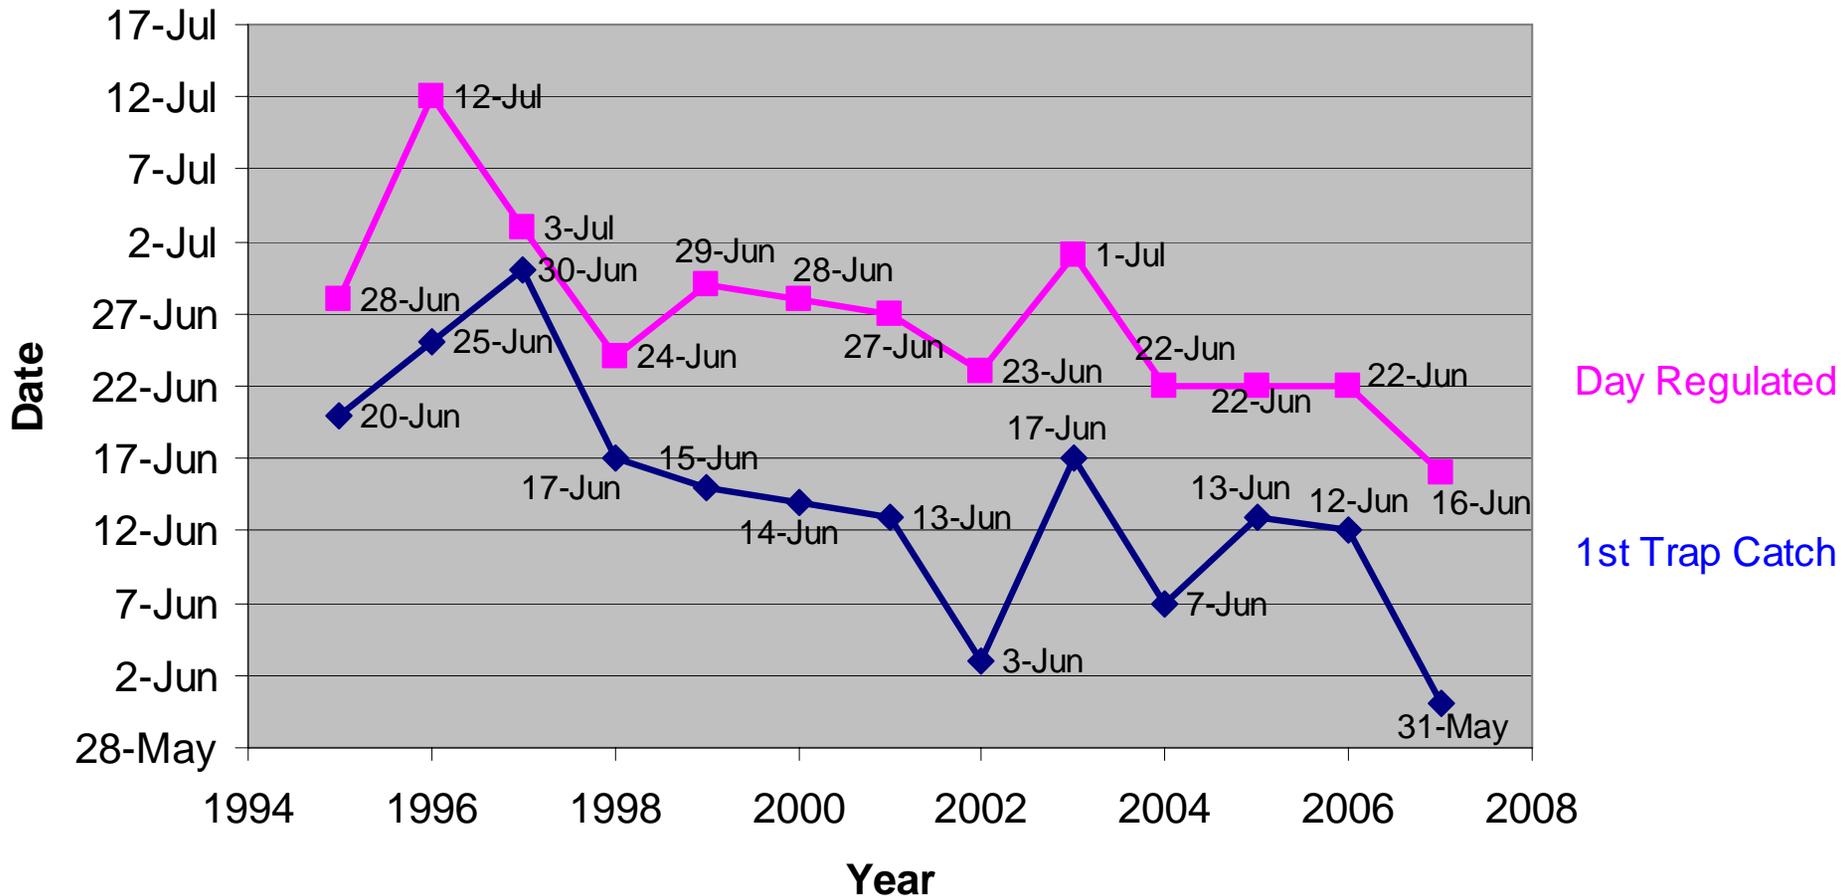

# USDA APHIS PPQ ROLE

- Provide JB safeguarding training.
- Provide the resources of 1 PPQ officer and 4 L/A's.
- Conduct pre-season grub survey.
- Ensure all safeguards properly.
- Monitor beetle activity
- Troubleshoot/look for v program

# Challenges of the 2007 Indianapolis JB Season

**1st Trap Catch and Day Regulated  
Indianapolis, IN 1995-2007**

# Factors Limiting JB Population

- Drought conditions during May – September (-8.75 inches)
- Airport crop practices
- Airport construction??

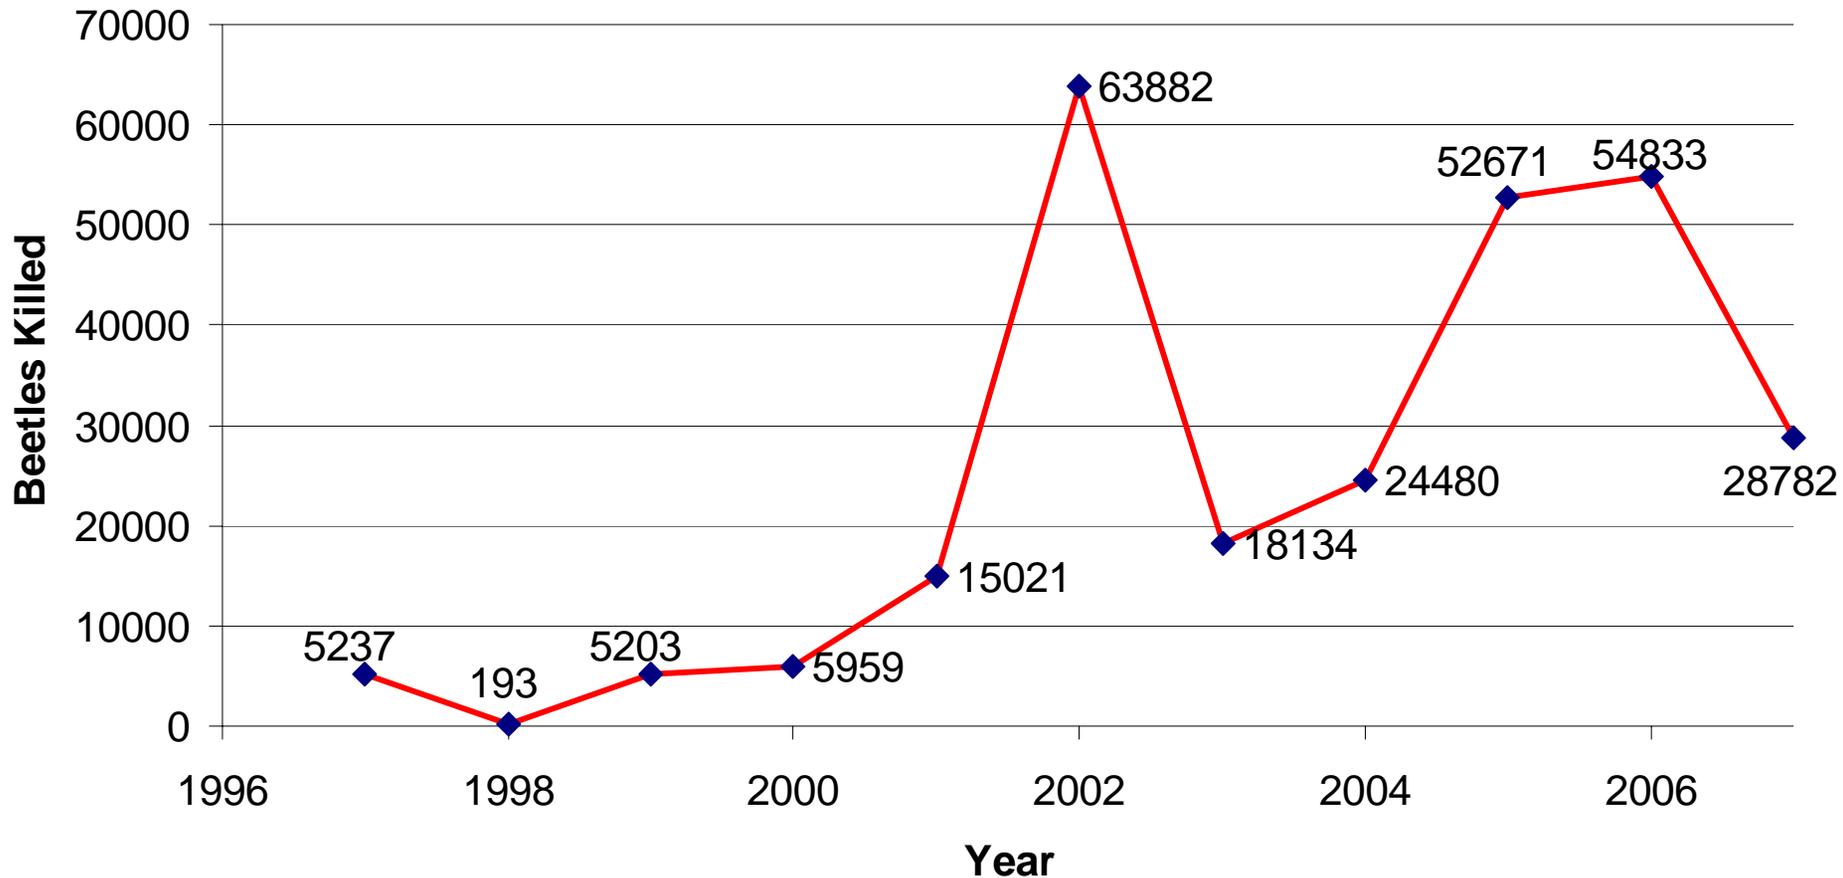

- Blitzing aircraft:
  - if 2 or more beetles are found on aircraft inspections.
  - if plane has been in Indy as a non-regulated flight.
  - all hangar aircraft.
- 15 minute walk arounds.
- Treat and safeguard aircraft known to be going to protected states within 48hrs as regulated aircraft.

- Limit the time all aircraft openings are open to onload and offload times on non-regulated and 48hr protected flights.
- Separating demi cans.
- Park aircraft for favorable wind direction to keep beetles off main cargo door.
- Magic beans...

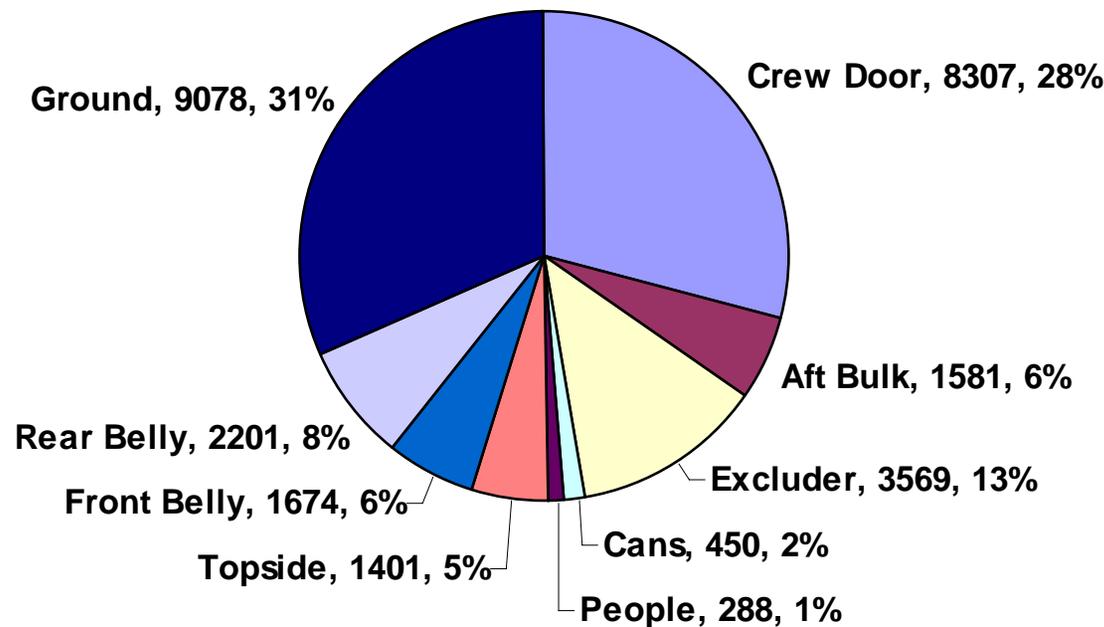

# 2007 Indianapolis Statistics

## JB Kill Totals at FedEx Indianapolis, IN: 1997-2007

2007 was the 4th highest population in the history of the Indianapolis JB Program.

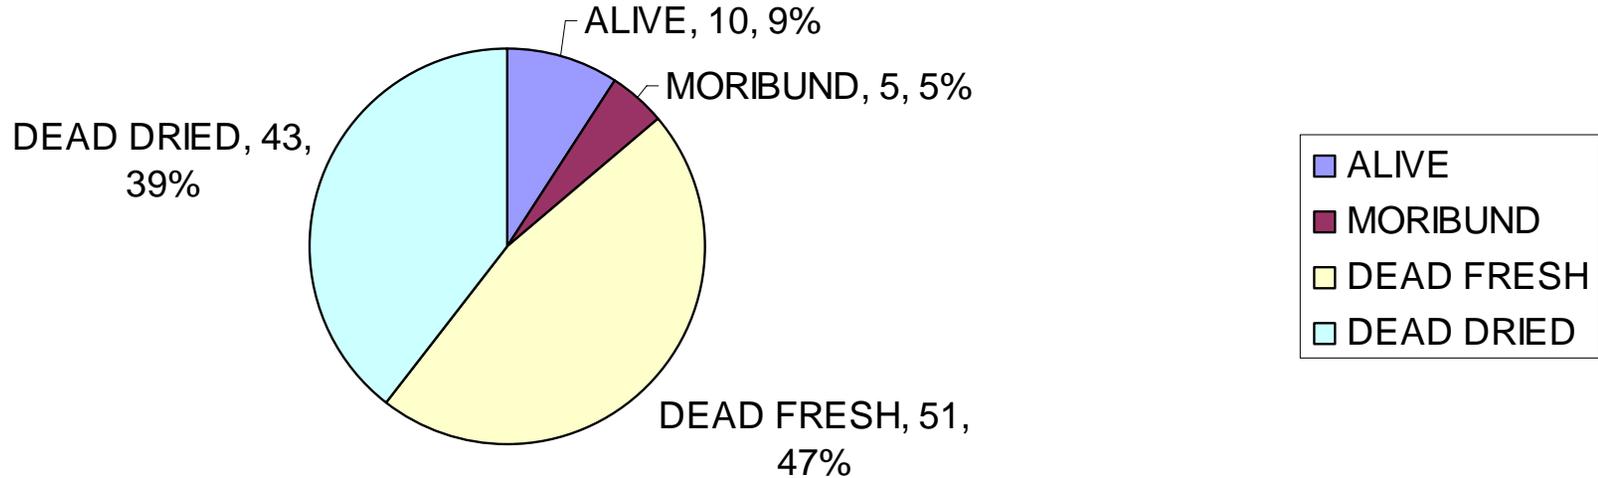

# Where Beetles Were Killed on Regulated Aircraft - 2007

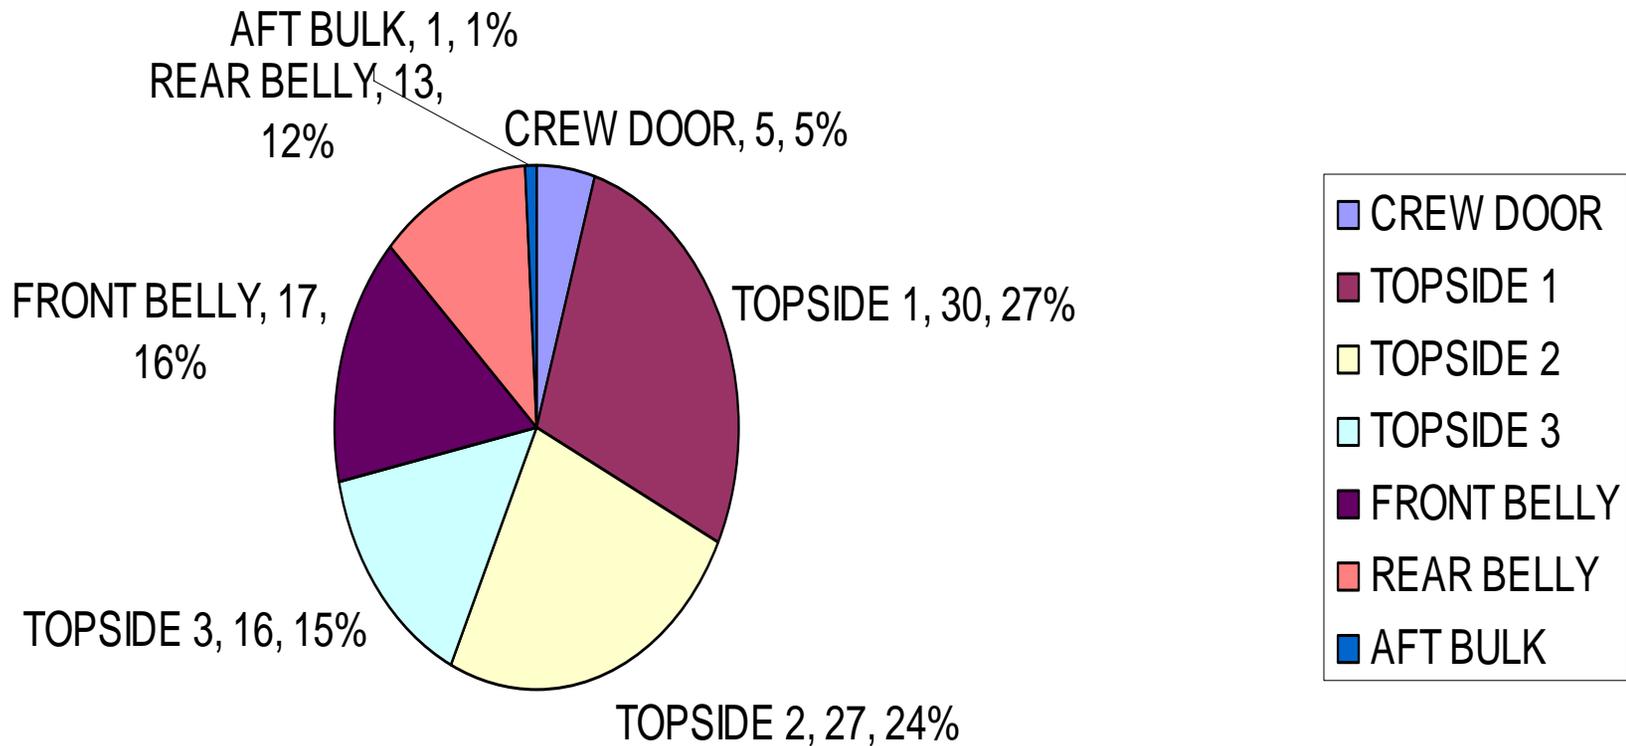

- Crew Door
- Aft Bulk
- Excluder
- Cans
- People
- Topside
- Front Belly
- Rear Belly
- Ground

# LIVE VS DEAD 2007

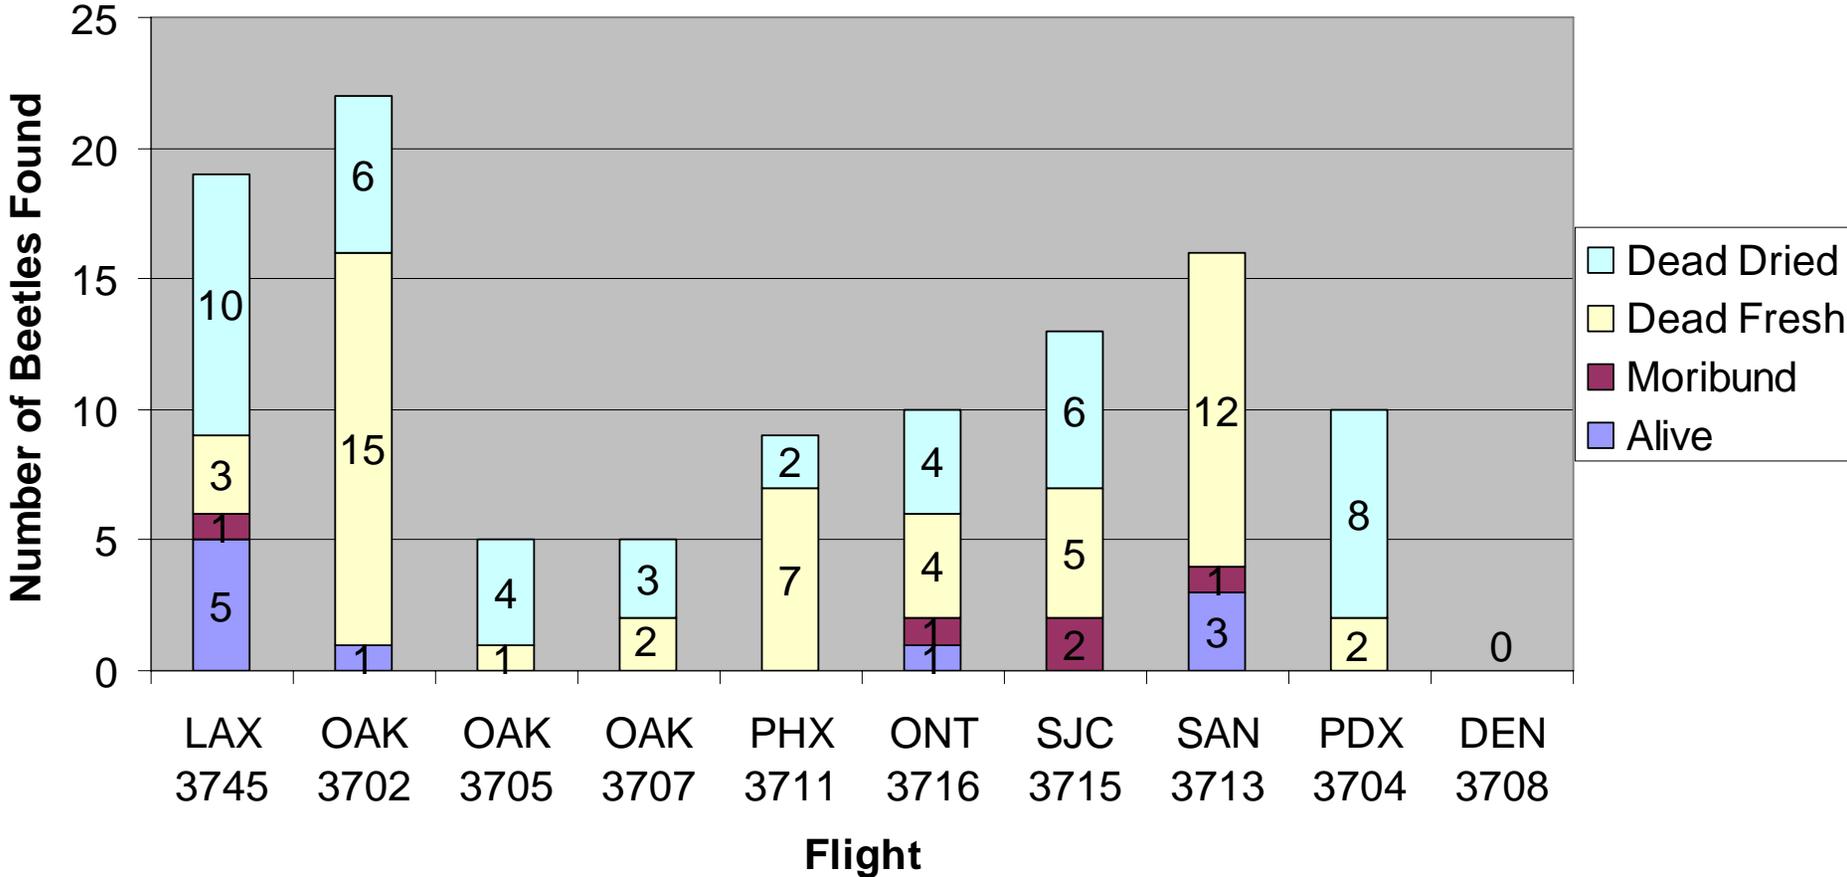

109 BEETLES WERE FOUND IN WESTERN JAPANESE BEETLE PROTECTED STATES ON FEDEX AIRCRAFT ORIGINATING IN INDIANAPOLIS, IN

## 2007 Where Beetles Were Found On Regulated Aircraft Originating at the FedEx Hub in Indianapolis, IN

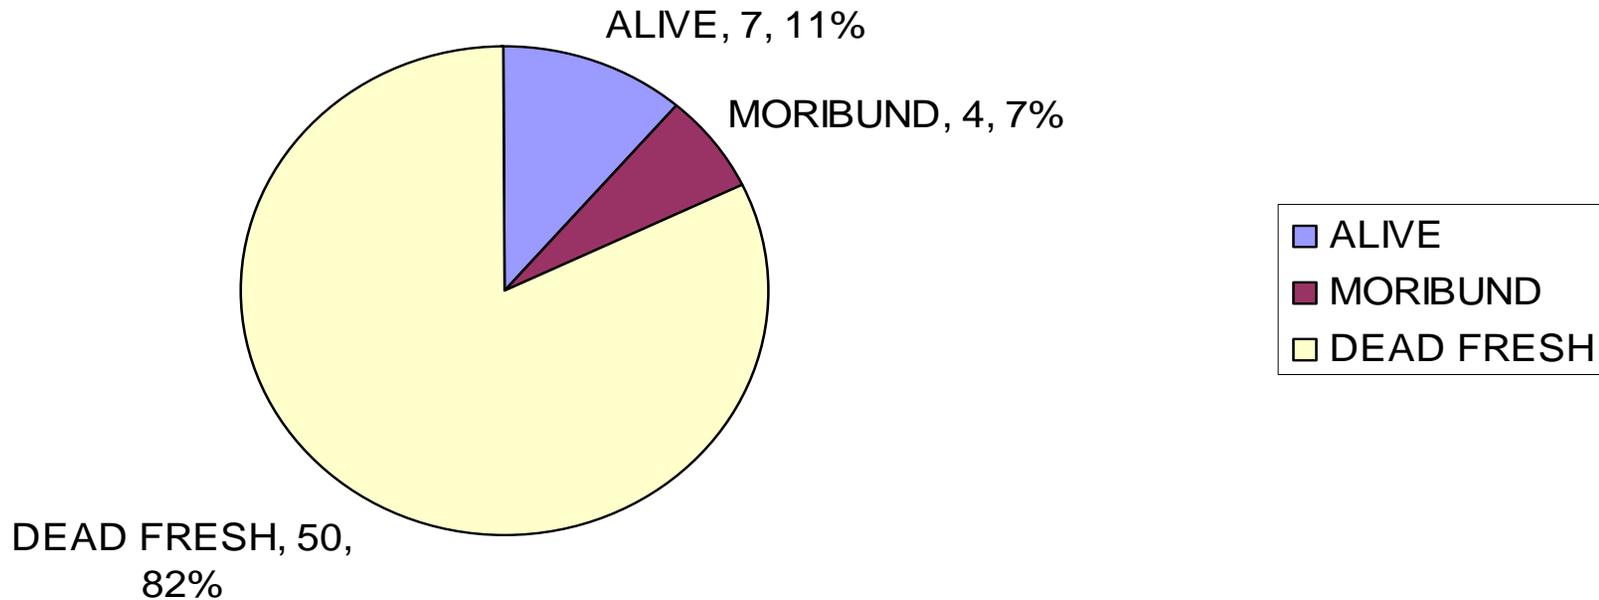

# 2007 Beetles Found at Destination

# HOW EFFECTIVE IS TEMPO 2007

(61 BEETLES WERE EXPOSED TO TEMPO)

89% EFFECTIVE

\*Two live beetles were found in the galley area and one live beetle was found on a package in the aft bulk compartment. One dead fresh and one moribund beetle were not exposed to Tempo. These beetles are not included in this graph because they were not exposed to the Tempo.
