NAHMS Feedlot Studies

Last Modified:

From March through August 2021, NAHMS collaborated with USDA's National Agricultural Statistics Service to conduct a national study focusing on cattle health and management on U.S. feedlots with at least 50 head.

The NAHMS Health Management on U.S. Feedlots 2021 study was designed to provide a snapshot of current feedlot cattle health management practices. The

information collected will also allow for the analysis of trends in specific topics related to cattle health, based on previous NAHMS feedlot studies.

NAHMS conducted additional beef feedlot studies in 2011, 1999, and 1994.
