

Dairy Products Originating from Ovine/Caprine Animals and Intended for Use in Feed/Milk Replacers for Ruminants

The European Union published on February 3, 2009, new requirements, effective February 23, 2009, for all dairy materials originating from ovine/caprine animals. The EU now requires certification for these materials (if imported for feeding to ruminant animals), that is not available for U.S.-origin materials.

At this time, APHIS believes ovine/caprine-origin dairy products to be ineligible for import to the EU for use in feed for ruminants.
