

## Summary of Studies Supporting USDA Product Licensure

Establishment Name	Boehringer Ingelheim Animal Health USA Inc.
USDA Vet Biologics Establishment Number	124
Product Code	49W5.21
True Name	Encephalomyelitis-Rhinopneumonitis-Influenza-West Nile Virus Vaccine, Eastern & Western & Venezuelan, Killed Virus, Tetanus Toxoid
Tradename(s) / Distributor or Subsidiary (if different from manufacturer)	Vetera Goldxp + VEE - No distributor specified
Date of Compilation Summary	February 06, 2019

**Disclaimer: Do not use the following studies to compare one product to another. Slight differences in study design and execution can render the comparisons meaningless.**

<b>Study Type</b>	Efficacy
<b>Pertaining to</b>	Clostridium tetanus
<b>Study Purpose</b>	Demonstration of efficacy against Clostridium tetanus
<b>Product Administration</b>	One dose, administered intramuscularly
<b>Study Animals</b>	10 guinea pigs (10 vaccinates)
<b>Challenge Description</b>	Not applicable
<b>Interval observed after challenge</b>	Not applicable
<b>Results</b>	<p>6 weeks after the injection, vaccinate serum samples were collected and pooled, then tested for antitoxin content by indirect Enzyme-Linked Immunosorbent Assay.</p> <p>A satisfactory value which met the requirements per 9 CFR 113.114(c) was achieved.</p>
<b>USDA Approval Date</b>	February 15, 2011

<b>Study Type</b>	Efficacy
<b>Pertaining to</b>	Eastern equine encephalomyelitis
<b>Study Purpose</b>	Demonstration of efficacy against Eastern equine encephalomyelitis
<b>Product Administration</b>	Two doses, administered intramuscularly, 14 to 21 days apart
<b>Study Animals</b>	12 guinea pigs (10 vaccinates, 2 controls)
<b>Challenge Description</b>	Not applicable
<b>Interval observed after challenge</b>	Not applicable
<b>Results</b>	<p>Serum samples were tested by a plaque reduction, serum neutralization test, 14 to 21 days after the second injection.</p> <p>Vaccinates and controls were evaluated in terms of Eastern equine encephalomyelitis per the criteria in 9 CFR 113.207(b) and the requirements were met.</p>
<b>USDA Approval Date</b>	February 15, 2011

<b>Study Type</b>	Efficacy
<b>Pertaining to</b>	Venezuelan equine encephalomyelitis
<b>Study Purpose</b>	Demonstration of efficacy against Venezuelan Equine Encephalomyelitis
<b>Product Administration</b>	Two doses, administered intramuscularly, 14 to 21 days apart
<b>Study Animals</b>	12 guinea pigs (10 vaccinates, 2 controls)
<b>Challenge Description</b>	Not applicable
<b>Interval observed after challenge</b>	Not applicable
<b>Results</b>	<p>Serum samples were tested by a plaque reduction, serum neutralization test, 14 to 21 days after the second injection.</p> <p>Vaccinates and controls were evaluated in terms of Venezuelan equine encephalomyelitis per the criteria in 9 CFR 113.207(b) and the requirements were met.</p>
<b>USDA Approval Date</b>	February 15, 2011

<b>Study Type</b>	Efficacy
<b>Pertaining to</b>	Western equine encephalomyelitis
<b>Study Purpose</b>	Demonstration of efficacy against Western equine encephalomyelitis
<b>Product Administration</b>	Two doses, administered intramuscularly, 14-21 days apart
<b>Study Animals</b>	12 guinea pigs (10 vaccinates, 2 controls)
<b>Challenge Description</b>	Not applicable
<b>Interval observed after challenge</b>	Not applicable
<b>Results</b>	<p>Serum samples were tested by a plaque reduction, serum neutralization test, 14 days after the second injection.</p> <p>Vaccinates and controls were evaluated in terms of Western equine encephalomyelitis per the criteria in 9 CFR 113.207(b) and the requirements were met.</p>
<b>USDA Approval Date</b>	February 15, 2011

<b>Study Type</b>	Efficacy																				
<b>Pertaining to</b>	Equine herpesvirus type 1 (EHV-1)																				
<b>Study Purpose</b>	Demonstration of efficacy against respiratory disease caused by EHV-1																				
<b>Product Administration</b>	Two doses, administered intramuscularly, 21 days apart																				
<b>Study Animals</b>	40 horses (20 vaccinates, 20 controls), 4-5 months of age																				
<b>Challenge Description</b>	Equine herpesvirus type 1 administered 15 days post-final vaccination																				
<b>Interval observed after challenge</b>	Horses were observed daily for 14 days post-challenge																				
<b>Results</b>	<p>See raw data on following pages.</p> <p>The horses were assessed for the presence of nasal discharge as signs of respiratory disease. The severity of nasal discharge was classified as “normal”, “mild”, or “moderate” according to the following classification of the nasal scores.</p> <table border="1"> <thead> <tr> <th>Disease status</th> <th>Maximum Nasal Score</th> </tr> </thead> <tbody> <tr> <td>Normal</td> <td>0 or 1</td> </tr> <tr> <td>Mild</td> <td>1.5 or 2</td> </tr> <tr> <td>Moderate</td> <td>4 or 6</td> </tr> </tbody> </table> <p>The number of horses in each category were:</p> <table border="1"> <thead> <tr> <th></th> <th>Normal</th> <th>Mild</th> <th>Moderate</th> </tr> </thead> <tbody> <tr> <td><b>Control</b></td> <td>0</td> <td>10</td> <td>10</td> </tr> <tr> <td><b>Vaccine</b></td> <td>6</td> <td>11</td> <td>3</td> </tr> </tbody> </table>	Disease status	Maximum Nasal Score	Normal	0 or 1	Mild	1.5 or 2	Moderate	4 or 6		Normal	Mild	Moderate	<b>Control</b>	0	10	10	<b>Vaccine</b>	6	11	3
Disease status	Maximum Nasal Score																				
Normal	0 or 1																				
Mild	1.5 or 2																				
Moderate	4 or 6																				
	Normal	Mild	Moderate																		
<b>Control</b>	0	10	10																		
<b>Vaccine</b>	6	11	3																		
<b>USDA Approval Date</b>	January 28, 2009

<b>Study Type</b>	Efficacy
<b>Pertaining to</b>	Equine influenza virus
<b>Study Purpose</b>	Demonstration of efficacy against respiratory disease and shedding caused by equine influenza
<b>Product Administration</b>	Two doses, administered intramuscularly, 21 days apart.
<b>Study Animals</b>	37 horses (18 vaccinates, 19 controls), approximately 9-10 months of age
<b>Challenge Description</b>	Influenza A/eq/Ohio/2003 administered 3 weeks post-final vaccination
<b>Interval observed after challenge</b>	Horses were observed, and nasal swabs were collected, daily for 15 days post-challenge.
<b>Results</b>	<p><b>See tables at the end of document for data.</b></p> <p><b>Clinical Signs:</b>  An animal was considered positive (affected by challenge) if the animal exhibited the following at any post-challenge observation point:</p> <ul style="list-style-type: none"> <li>• Fever (temperature <math>\geq 102.5^{\circ}\text{F}</math>), OR</li> <li>• Ocular discharge, OR</li> <li>• Nasal discharge (very slight mucopurulent discharge, or worse)</li> </ul> <p><b>Duration</b> of disease was calculated from the date the animal was first observed to be positive to the date of last positive observation for that animal. Based on this calculation, the median duration of disease for the controls was determined to be 11 days as compared to 3 days for the vaccinates.</p> <p><b>Nasal shedding</b> of influenza virus was evaluated through nasal swab virus isolation results. An animal was considered positive if virus was isolated from nasal swabs on one or more occasions following challenge.</p> <p>0/18 vaccinates shed virus and 12/19 controls shed virus.</p> <p>There were no adverse reactions to vaccine administration at any timepoint.</p>
<b>USDA Approval Date</b>	April 8, 2013

**Ocular Discharge:** 0=none; 1=mild to moderate; 2=severe

**Nasal Discharge:** 0=none; 1=slight clear serous, as may be observed in both normal and diseased horses; 1.5=very slight mucopurulent discharge, one or both nostrils; 2=moderate clear serous discharge, easily seen in one or both nostrils; 3=Abundant clear serous discharge typically seen only in diseased horses; 4=moderately mucopurulent, in large quantities in both nostrils; 5=heavy mucopurulent discharge in large amounts in both nostrils

<b>Study Type</b>	Efficacy
<b>Pertaining to</b>	Equine influenza
<b>Study Purpose</b>	Demonstration of efficacy against respiratory disease caused by equine influenza A2 strain Richmond 07
<b>Product Administration</b>	Two doses, administered intramuscularly, 21 days apart
<b>Study Animals</b>	20 horses (20 vaccinates), 12 months of age
<b>Challenge Description</b>	Not applicable
<b>Interval observed after challenge</b>	Not applicable
<b>Results</b>	This product class allows the manufacturer to update micro-organisms in this vaccine under expedited procedures to respond to emerging needs. Abbreviated data to support influenza strain updates to the product composition were evaluated by USDA-APHIS and found to be acceptable based on regulations and policies at the time of approval. Full vaccination-challenge studies may not have been required for these updates.

Scoring of histopathological lesions:	
0 =	No significant lesions.
0.5 =	Rare, small, multifocal glial nodules scattered throughout the parenchyma.
1 =	Mild, nonsuppurative encephalitis characterized by mild multifocal perivascular cuffs with lymphocytes and plasma cells and a rare neutrophil and scattered multifocal glial nodules composed of glial cells with a few mononuclear inflammatory cells. Occasionally within this grade, there may be minimal perivascular cuffing and more moderate scattered glial nodules.
2 =	Moderate nonsuppurative encephalitis characterized by moderate lymphoplasmacytic perivascular cuffs around many vessels and multifocal accumulations of glial nodules scattered throughout the parenchyma.
3 =	Severe nonsuppurative encephalitis characterized by severe and thick lymphoplasmacytic perivascular cuffing with multiple scattered glial nodules throughout the parenchyma.

<b>Study Type</b>	Efficacy																																												
<b>Pertaining to</b>	West Nile Virus (WNV)																																												
<b>Study Purpose</b>	Demonstration of seven month duration of immunity against WNV																																												
<b>Product Administration</b>	Two doses, administered intramuscularly 22 days apart																																												
<b>Study Animals</b>	30 horses (20 vaccinates, 10 placebo controls) 4-5 months of age																																												
<b>Challenge Description</b>	Challenged with West Nile Virus at 201 days (Group 1: 10 vaccinated and 5 placebo control animals) or 222 days (Group 2: 10 vaccinated and 5 placebo control animals) after the second vaccination.																																												
<b>Interval observed after challenge</b>	Horses were bled on the day of challenge, twice daily for 6 days post-challenge, once daily for an additional 4 days post-challenge, and on day 14 post-challenge																																												
<b>Results</b>	<p>The primary outcome was viremia (detection of WNV in the blood). An animal was considered to be positive if virus was detected in the blood on one or more occasions post-challenge.</p> <p>The number of animals positive for viremia at least once is summarized for as follows:</p> <table border="1"> <thead> <tr> <th>Challenge Group</th> <th>Controls</th> <th>Vaccinates</th> </tr> </thead> <tbody> <tr> <td>1</td> <td>5/5 (100%)</td> <td>1/10 (10%)</td> </tr> <tr> <td>2</td> <td>5/5 (100%)</td> <td>3/10 (30%)</td> </tr> </tbody> </table> <p>The outcome for <b>viremia</b> is as follows for the first group of horses challenged 201 days following the second vaccination:</p> <table border="1"> <thead> <tr> <th></th> <th>Horse ID</th> <th>Challenge Group 1</th> </tr> </thead> <tbody> <tr> <td rowspan="5"><b>Controls (5 horses)</b></td> <td>S16</td> <td>Positive</td> </tr> <tr> <td>S21</td> <td>Positive</td> </tr> <tr> <td>S23</td> <td>Positive</td> </tr> <tr> <td>S26</td> <td>Positive</td> </tr> <tr> <td>S30</td> <td>Positive</td> </tr> <tr> <td rowspan="10"><b>Vaccinates (10 horses)</b></td> <td>S17</td> <td>Negative</td> </tr> <tr> <td>S18</td> <td>Negative</td> </tr> <tr> <td>S19</td> <td>Negative</td> </tr> <tr> <td>S20</td> <td>Negative</td> </tr> <tr> <td>S22</td> <td>Positive</td> </tr> <tr> <td>S24</td> <td>Negative</td> </tr> <tr> <td>S25</td> <td>Negative</td> </tr> <tr> <td>S27</td> <td>Negative</td> </tr> <tr> <td>S28</td> <td>Negative</td> </tr> <tr> <td>S29</td> <td>Negative</td> </tr> </tbody> </table> <p>Positive = WNV detected in blood on one or more occasions post-challenge  Negative = WNV detected in blood on zero occasions post-challenge</p>	Challenge Group	Controls	Vaccinates	1	5/5 (100%)	1/10 (10%)	2	5/5 (100%)	3/10 (30%)		Horse ID	Challenge Group 1	<b>Controls (5 horses)</b>	S16	Positive	S21	Positive	S23	Positive	S26	Positive	S30	Positive	<b>Vaccinates (10 horses)</b>	S17	Negative	S18	Negative	S19	Negative	S20	Negative	S22	Positive	S24	Negative	S25	Negative	S27	Negative	S28	Negative	S29	Negative
Challenge Group	Controls	Vaccinates																																											
1	5/5 (100%)	1/10 (10%)																																											
2	5/5 (100%)	3/10 (30%)																																											
	Horse ID	Challenge Group 1

	S27	Negative																																											
	S28	Negative																																											
	S29	Negative																																											

The outcome for **viremia** is as follows for the second group of horses challenged 222 days following the second vaccination:

	Horse ID	Challenge Group 2
<b>Controls (5 horses)</b>	S32	Positive
	S36	Positive
	S39	Positive
	S40	Positive
	S43	Positive
<b>Vaccinates (10 horses)</b>	S31	Negative
	S33	Positive
	S34	Negative
	S35	Positive
	S37	Negative
	S38	Negative
	S41	Negative
	S42	Negative
	S44	Negative
	S45	Positive

Positive = WNV detected in blood on one or more occasions post-challenge  
 Negative = WNV detected in blood on zero occasions post-challenge

<b>Study Type</b>	Safety
<b>Pertaining to</b>	All fractions
<b>Study Purpose</b>	To demonstrate safety in pregnant mares under field conditions at two different test sites
<b>Product Administration</b>	Two intramuscular doses, given 16-28 days apart. 54 pregnant mares were injected with placebo and 325 pregnant mares were vaccinated with test product.
<b>Study Animals</b>	Three hundred seventy-nine pregnant mares at two locations were included in the study. The mares were confirmed to be pregnant by serum hormonal evaluation on the day of the first vaccination.
<b>Challenge Description</b>	Not applicable
<b>Interval observed after vaccination</b>	1 <sup>st</sup> and 2 <sup>nd</sup> trimester: Mares observed immediately after vaccination and daily for overall health and for abortion. Resulting foals were observed daily for 7 days following birth. 3 <sup>rd</sup> trimester: Mares observed immediately after vaccination and daily for overall health and for abortion. Resulting foals were observed daily for 30 days following birth.
<b>Results</b>	Results shown on next page
