

## Specific comment

### 1) Disinfection of Fish Farms

Article 5.2.2.1

#### General principles

- a) The proposed text: “The use of chemical products entails the implementation of measures to protect personnel “and the environment”” should be changed to: “**The use of chemical products entails the implementation of measures to protect personnel and the cultured animals and mitigate environmental effects.** This recommended change creates more inclusive objectives.
- b) The proposed text “Ideally, an approval scheme for [disinfection of products] disinfectants for use in aquaculture should be established.” is incorrect syntax. It should be written as: “**Ideally, [an approval scheme] approved protocols (or procedures) for [disinfection of products] the use of disinfectants in aquaculture should be established.**”
