There were 13 surveillance inspections conducted at 12 different sites for a total of 120 fish sampled this month. Samples are targeted to moribund and fresh mortalities when possible. The water temperatures continued to rise in response to the warmer air temperatures. Routine harvest continued. One cage was confirmed positive this month. It was removed proactively by the company before it was confirmed. This site was considered Category 2 and increased sampling frequency until it was completely harvested and no fish remained. All other sites with fish in the water remained Category 1 and were scheduled for monthly sampling.
