July 2015	120	0	18239

There were 12 surveillance inspections conducted at 9 different sites for a total of 120 fish sampled this month. Samples are targeted to moribund and fresh mortalities when possible. All sites were scheduled for monthly or bimonthly sampling. Routine harvest of market-size fish continued and stocking of smolts was completed. The water temperatures continued to increase in response to the warm air temperatures. There were no cages confirmed this month. All sites with fish in the water were Category 1 as of the end of the month; except for two sites which were Category 2 due to single suspect tests which are under investigation.
