\* Based on all NVSL-confirmed cases as of September 30, 2021.

\*\* Sampling Stage 1 minimums are set at 1.5 times the equivalent population size in Stage 2 and are based on the same % of population for all of the states in the same stage.

\*\*\* In FY 2021 minimums were calculated based on regions which resulted in states in some regions having to sample a higher percentage of their breeding population. In FY 2022 this was changed so that all states sample the same percentage (0.6% to a maximum of 1000 sheep for Stage 1, low risk and 0.4% to a maximum of 1,000 goats for Stage 2, very low risk) of their breeding population. In States where this resulted in an increase, the increase was capped at 10% of the FY 2021 minimum.
