* Based on all NVSL-confirmed cases as of September 30, 2022.

** Sampling Stage 1 minimums are set at 1.5 times the equivalent population size in Stage 2 and are based on the same % of population for all of the states in the same stage.

*** In FY 2021, minimums were calculated based on regions which resulted in States in some regions having to sample a higher percentage of their breeding population. In FY 2022 this was changed so that all States sample the same percentage of their breeding population (0.6% to a maximum of 1000 sheep for Stage 1 - low risk, and 0.4% to a maximum of 1,000 sheep for Stage 2 - very low risk). In States where this resulted in an increase in the minimum for FY 2022, the increase was capped at 10% of the FY 2021 minimums. For FY 2023 we are capping the increase at 10% over FY 2022 minimums or the actual number collected in FY 2021, whichever is greater.

² Source: NASS Sheep and Goats 2021, Jan 31, 2022

³ Adjusted to 81% of original minimums due to COVID 19 restrictions

⁴ Adjusted to 74% of original minimums due to COVID 19 restrictions

⁵ States denoted as 1->2 will move to stage 2 sampling if no new positive cases are found and if sampling minimums have been met in 4 out of the past 5 years. The minimums in this draft assume movement into stage 2.

^ Met sampling requirement to move to stage 2 by sampling over 3,000 since the last positive was found.
