

Species Previously Regulated by APHIS for VHS

June 2, 2014

The United States Department of Agriculture (USDA), Animal and Plant Health Inspection Service (APHIS), Veterinary Services (VS) has identified the following species (1) as having originated in freshwater locations in the United States and/or Canada; (2) as having been infected by VHS virus under natural (i.e. non-experimental) conditions of exposure; and (3) from which VHS virus has been detected by PCR in fish tissues or isolated in cell culture and identified through sequence analysis of PCR amplicon. Anadromous fish species that have migrated into freshwater and from which VHS strain type IV(a) is isolated are excluded from this definition. This list was last updated in September 2008.

USDA, APHIS, VS will be working with stakeholders to update this list.
