

# 2015 Vesicular Stomatitis Virus (VSV) Situation Report – Apr 29, 2015

*Information current as of 2:00 pm MDT, 04/29/2015*

On April 29, 2015, the National Veterinary Services Laboratories (NVSL) in Ames, Iowa, confirmed a finding of vesicular stomatitis virus (VSV) infection (New Jersey serotype) on a premises in Grant County, New Mexico. One horse on the premises has met the case definition of infection with compatible clinical signs and a four-fold change in positive complement fixation antibody titers. This is the 2015 VSV index case for the United States.

Additionally, a horse on a second premises located in Otero County, New Mexico has met the subsequent premises case definition of VSV infection (New Jersey serotype) with compatible clinical signs and positive complement fixation antibody titer. Therefore, there are currently a total of two (2) VSV-positive premises under quarantine in New Mexico.

## VSV Current Premises Quarantined
