

2015 Vesicular Stomatitis Virus (VSV) Situation Report – August 12, 2015

Information current as of 5:00 pm MDT, 08/11/2015

Updated information in blue ink

Critical New Information

- **Newly affected counties** have been identified in Colorado ([Conejos County](#), [Weld County](#)), New Mexico ([Rio Arriba County](#)), South Dakota ([Custer County](#), [Lawrence County](#)), Utah ([Grand County](#)), and Wyoming ([Platte County](#)).

Summary of the Outbreak

The 2015 VSV outbreak in the United States began April 29, 2015. To date, a total of [two hundred fifteen \(215\)](#) VSV-affected premises (New Jersey serotype) have been confirmed or suspected in seven (7) U.S. states; Arizona (35 premises in 2 counties), Colorado ([118](#) premises in [11](#) counties), New Mexico ([29](#) premises in [11](#) counties), South Dakota ([12](#) premises in [4](#) counties), Texas (3 premises in 3 counties), Utah ([5](#) premises in [3](#) counties), and Wyoming ([13](#) premises in [3](#) counties). Currently, there are [107](#) premises remaining under quarantine in 5 states (Colorado, New Mexico, South Dakota, Utah, and Wyoming).

New Confirmed/Suspect Premises

Since the last situation report ([8/5/15](#)), the following [fifty-seven \(57\)](#) new **VSV-confirmed (New Jersey serotype) and/or suspect premises** have been identified and quarantined:

Colorado [[10](#) new confirmed ([3](#) previously reported as suspect), [24](#) new suspect premises]

- Archuleta County– [1](#) new confirmed positive premises
- [Conejos County](#) (new affected county) – [1](#) new confirmed positive premises
- Delta County – [2](#) new confirmed positive premises, [6](#) new suspect premises
- La Plata County – [1](#) new confirmed positive premises, [1](#) new suspect premises
- Larimer County – [1](#) new confirmed positive premises, [9](#) new suspect premises
- Mesa County – [2](#) new suspect premises
- Montrose County – [3](#) new confirmed positive premises, [5](#) new suspect premises
- [Weld County](#) (new affected county) – [1](#) new confirmed positive premises, [1](#) new suspect premises

New Mexico (6 new suspect premises)

- Rio Arriba County (new affected county) – 2 new suspect premises
- San Juan County – 4 new suspect premises

South Dakota [1 new confirmed (previously reported as suspect), 7 new suspect premises]

- Custer County (new affected county) –1 new suspect premises
- Lawrence County (new affected county) -1 new suspect premises
- Meade County – 1 new confirmed premises, 3 new suspect premises
- Pennington County – 2 new suspect premises

Utah (1 new confirmed premises)

- Grand County (new affected county) – 1 new confirmed positive premises

Wyoming (1 new confirmed, 7 new suspect premises)

- Goshen County –1 new suspect premises
- Platte County (new affected county) – 1 new confirmed, 6 new suspect premises

New Quarantine Releases

Quarantined premises are eligible for release 14 days after the onset of lesions in the last affected animal on the premises. Since the last situation report (8/5/15), the following **nineteen (19)** premises have been **released from quarantine**:

Colorado (13 premises released)

- Archuleta County – 1 confirmed and 1 suspect premises released
- Delta County – 2 suspect premises released
- La Plata County – 1 suspect premises released
- Larimer County –1 confirmed and 2 suspect premises released
- Mesa County – 1 suspect premises released
- Montezuma County – 2 suspect premises released
- Montrose County – 2 suspect premises released

New Mexico (4 premises released)

- San Juan County – 3 suspect premises released
- Santa Fe County – 1 suspect premises released

South Dakota (1 premises released)

- Pennington County – 1 confirmed premises released

Wyoming (1 premises released)

- Goshen County – 1 confirmed premises released

VSV Current Premises

Table 1. Location and number of premises currently under movement control for VSV

	New Premises 8/5- 8/11/15 Confirmed (Suspect)	Total Current Premises last report	VSV Premises Released 8/5 – 8/11/15	Total Current Premises

Map 1. VSV Current: Counties with Current Premises Quarantined

Map 2. VSV Cumulative: Counties with Premises Quarantined April 29, 2015-present

Background

On April 29, 2015, the National Veterinary Services Laboratories (NVSL) in Ames, Iowa, confirmed a finding of vesicular stomatitis virus (VSV) infection (New Jersey serotype) on a premises in Grant County, New Mexico. One horse on the premises has met the case definition of infection with compatible clinical signs and a four-fold change in positive complement fixation antibody titers. This is the 2015 VSV index case for the United States.

On May 1, 2015, the National Veterinary Services Laboratories (NVSL), confirmed findings of vesicular stomatitis virus (VSV) infection (New Jersey serotype) on premises in Maricopa County, Arizona and Kane County, Utah. Three horses on two premises in Maricopa County, Arizona met the case definition of infection with compatible clinical signs and positive complement fixation antibody titers. One mule on a premises in Kane County, Utah met the case definition of infection with compatible clinical signs and positive virus isolation. The equids involved in the Kane County, Utah case had moved from Arizona just prior to identification of clinical signs. These are the 2015 VSV index cases for Arizona and Utah, respectively.

On May 18, 2015, the National Veterinary Services Laboratories in Ames, Iowa confirmed a finding of VSV infection (New Jersey serotype) on a premises in Pecos County, Texas. Two horses and a mule on the premises met case definition of infection with compatible clinical signs and positive complement fixation antibody titers. This is the 2015 index case of VSV for Texas.

On July 2, 2015, the National Veterinary Services Laboratories (NVSL) in Ames, Iowa confirmed findings of VSV infection (New Jersey serotype) on three (3) premises located in Colorado; one equine premises in Delta County, Colorado and two equine premises in Montrose County, Colorado. Two horses and two mules on the three premises met case definition of infection with compatible clinical signs and positive complement fixation antibody titers. These are the 2015 index cases of VSV for Colorado.

As of July 7, 2015, all VSV-affected premises were released from quarantine in Texas.

As of July 15, 2015, all VSV-affected premises were released from quarantine in Arizona.

On July 22, 2015, the National Veterinary Services Laboratories (NVSL) in Ames, Iowa confirmed a finding of vesicular stomatitis virus (VSV) infection (New Jersey serotype) from a premises in Laramie County, Wyoming. One horse from the premises has met the case definition of infection with compatible clinical signs and positive virus isolation. This is the 2015 VSV index case for Wyoming.

On July 30, 2015, the National Veterinary Services Laboratories (NVSL) in Ames, Iowa confirmed a finding of vesicular stomatitis virus (VSV) infection (New Jersey serotype) from a premises in Pennington County, South Dakota. Two horses from the premises met the case definition of infection with compatible clinical signs and positive complement fixation antibody titers. This is the 2015 VSV index case for South Dakota.

Although all VSV-affected premises had initially been released from quarantine in Utah as of May 14, 2015, on August 3, 2015, the National Veterinary Services Laboratories (NVSL) on Plum Island, NY subsequently confirmed a finding of vesicular stomatitis virus (VSV) infection (New Jersey serotype) from a cattle premises in San Juan County, Utah. One Jersey cow from the premises met the case definition of infection with compatible clinical signs and positive virus isolation. Based on this confirmation, Utah was added back to the list of currently VSV-affected states.
