

2015 Vesicular Stomatitis Virus (VSV) Situation Report – September 2, 2015

Information current as of 10:00 am MDT, 09/02/2015

Updated information in blue ink

Critical New Information

- **Sixty-one (61)** new VSV-confirmed (New Jersey serotype) and/or suspect premises have been identified and quarantined since the last situation report (8/26/15).
- **Newly affected counties** have been identified in:
 - **Colorado** (Rio Blanco County)
 - **Wyoming** (Fremont County)
- Since the start of the outbreak, **three hundred eighty-six (386)** VSV-affected premises (New Jersey serotype) have been identified and quarantined in 7 states (Arizona, Colorado, New Mexico, South Dakota, Texas, Utah, and Wyoming).
- Currently, there are **one hundred twenty-nine (129)** affected premises remaining under quarantine in 5 states (Colorado, New Mexico, South Dakota, Utah, and Wyoming).

Summary of the Outbreak

The 2015 VSV outbreak in the United States began April 29, 2015. To date, a total of **three hundred eighty-six (386)** VSV-affected premises (New Jersey serotype) have been confirmed or suspected in seven (7) U.S. states; Arizona (35 premises in 2 counties), Colorado (**208** premises in **18** counties), New Mexico (**45** premises in 12 counties), South Dakota (**35** premises in 5 counties), Texas (3 premises in 3 counties), Utah (**15** premises in 3 counties), and Wyoming (**45** premises in **6** counties). Currently, there are **129** premises remaining under quarantine in 5 states (Colorado, New Mexico, South Dakota, Utah, and Wyoming).

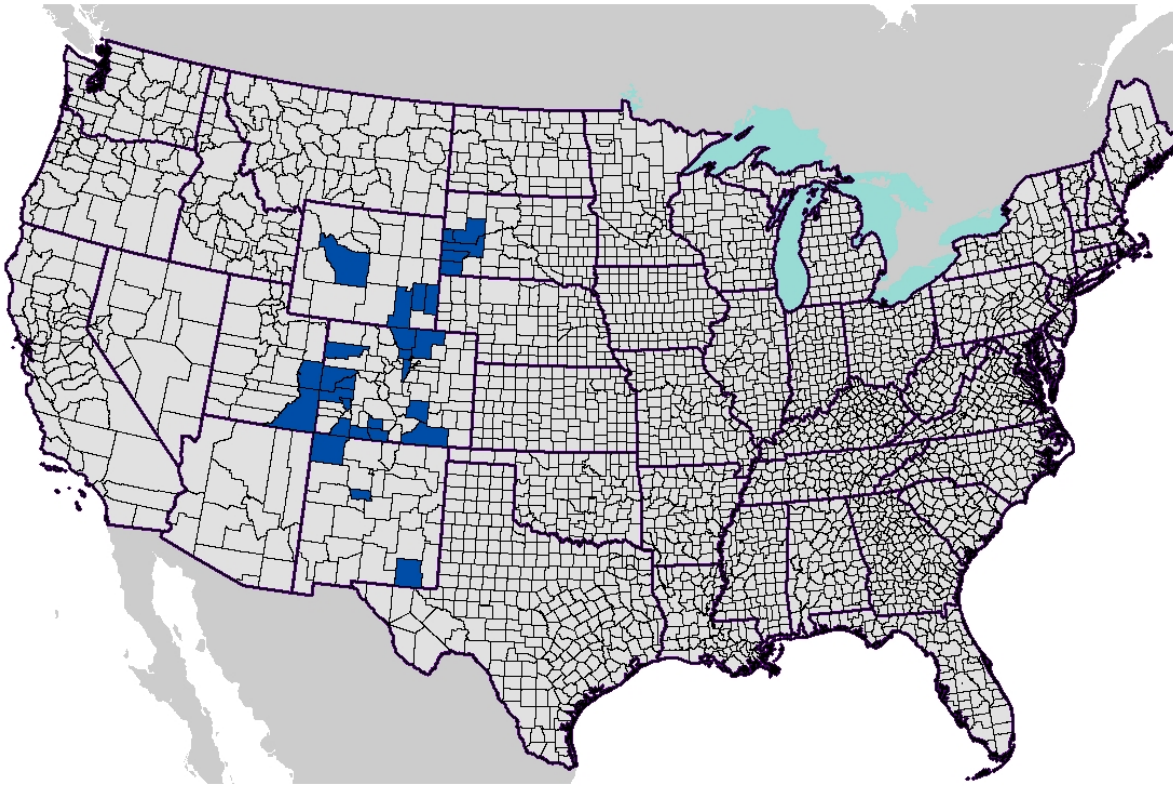

VSV Current Premises

*Count contains premises previously reported as suspect that are now confirmed as VSV-positive.

Map 1. VSV Current: Counties with Current Premises Quarantined

New Confirmed/Suspect Premises

Since the last situation report (8/26/15), the following **sixty-one (61) new VSV-confirmed (New Jersey serotype) and/or suspect premises** have been identified and quarantined:

Colorado [11 new confirmed (6 previously reported as suspect), 24 new suspect premises]

- Conejos County – 1 new confirmed positive premises
- Jefferson County – 1 new confirmed positive, 3 new suspect premises
- La Plata County – 1 new confirmed positive premises
- Larimer County – 2 new suspect premises
- Mesa County – 2 new confirmed positive, 14 new suspect premises
- Montrose County – 2 new confirmed positive, 1 new suspect premises
- Ouray County – 1 new suspect premises
- Rio Blanco County (new affected county) – 2 new confirmed positive premises
- Rio Grande County – 2 new confirmed positive premises
- Weld County – 3 new suspect premises

New Mexico (1 new suspect premises)

- San Juan County – 1 new suspect premises

South Dakota (2 new confirmed, 9 new suspect premises)

- Custer County – 1 new suspect premises
- Fall River County – 2 new confirmed, 1 new suspect premises
- Lawrence County – 2 new suspect premises

- Meade County – 3 new suspect premises
- Pennington County – 2 new suspect premises

Utah [3 new confirmed (all previously reported suspect), 2 new suspect premises, 1 premises re-quarantined]

- Grand County – 3 new confirmed, 2 new suspect premises
- San Juan County – 1 confirmed positive premises has been re-quarantined due to presentation of new clinical animals after quarantine release

Wyoming (2 new confirmed , 7 new suspect premises)

- Fremont County (new affected county) – 1 new suspect premises (exposed to confirmed positive)
- Platte County – 2 new confirmed, 6 new suspect premises

New Quarantine Releases

Quarantined premises are eligible for release 14 days after the onset of lesions in the last affected animal on the premises. Since the last situation report (8/26/15), the following **fifty-two (52)** premises have been **released from quarantine**:

Colorado (31 premises released)

- Conejos County – 1 premises released
- Delta County – 5 premises released
- Gunnison County – 1 premises released
- Jefferson County – 1 premises released
- La Plata County – 3 premises released
- Larimer County – 8 premises released
- Mesa County – 3 premises released
- Montezuma County – 2 premises released
- Montrose County – 4 premises released
- Ouray County – 1 premises released
- Weld County – 2 premises released

New Mexico (6 premises released)

- Sandoval County – 1 premises released
- San Juan County – 5 premises released

South Dakota (3 premises released)

- Lawrence County – 1 premises released
- Meade County – 1 premises released
- Pennington County – 1 premises released

Wyoming (12 premises released)

- Laramie County – 2 premises released
- Platte County – 8 premises released
- Sublette County – 2 premises released

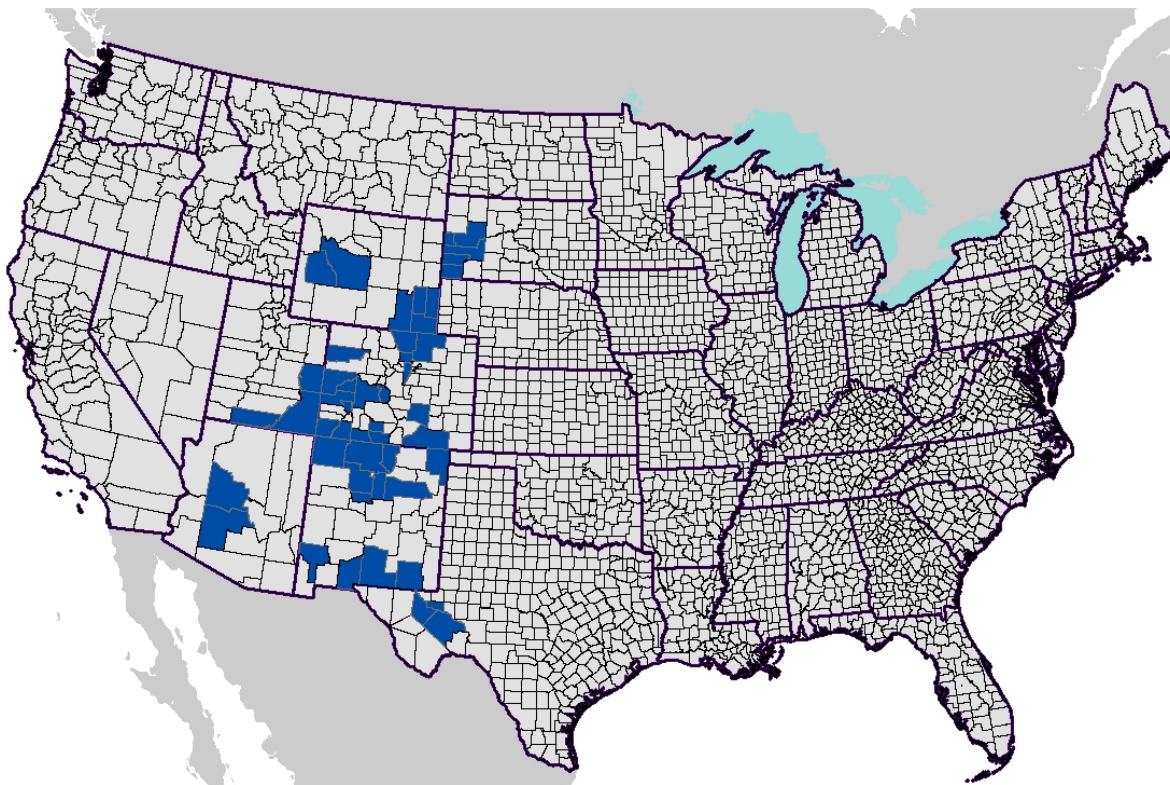

VSV Cumulative Premises

Map 2. VSV Cumulative: Counties with Premises Quarantined April 29, 2015-present

Background

On April 29, 2015, the National Veterinary Services Laboratories (NVSL) in Ames, Iowa, confirmed a finding of vesicular stomatitis virus (VSV) infection (New Jersey serotype) on a premises in Grant County, New Mexico. One horse on the premises has met the case definition of infection with compatible clinical signs and a four-fold change in positive complement fixation antibody titers. This is the 2015 VSV index case for the United States.

On May 1, 2015, the National Veterinary Services Laboratories (NVSL), confirmed findings of vesicular stomatitis virus (VSV) infection (New Jersey serotype) on premises in Maricopa County, Arizona and Kane County, Utah. Three horses on two premises in Maricopa County, Arizona met the case definition of infection with compatible clinical signs and positive complement fixation antibody titers. One mule on a premises in Kane County, Utah met the case definition of infection with compatible clinical signs and positive virus isolation. The equids involved in the Kane County, Utah case had moved from Arizona just prior to identification of clinical signs. These are the 2015 VSV index cases for Arizona and Utah, respectively.

On May 18, 2015, the National Veterinary Services Laboratories in Ames, Iowa confirmed a finding of VSV infection (New Jersey serotype) on a premises in Pecos County, Texas. Two horses and a mule on the premises met case definition of infection with compatible clinical signs and positive complement fixation antibody titers. This is the 2015 index case of VSV for Texas.

On July 2, 2015, the National Veterinary Services Laboratories (NVSL) in Ames, Iowa confirmed findings of VSV infection (New Jersey serotype) on three (3) premises located in Colorado; one equine premises in Delta County, Colorado and two equine premises in Montrose County, Colorado. Two horses and two mules on the three premises met case definition of infection with compatible clinical signs and positive complement fixation antibody titers. These are the 2015 index cases of VSV for Colorado.

As of July 7, 2015, all VSV-affected premises were released from quarantine in Texas.

As of July 15, 2015, all VSV-affected premises were released from quarantine in Arizona.

On July 22, 2015, the National Veterinary Services Laboratories (NVSL) in Ames, Iowa confirmed a finding of vesicular stomatitis virus (VSV) infection (New Jersey serotype) from a premises in Laramie County, Wyoming. One horse from the premises has met the case definition of infection with compatible clinical signs and positive virus isolation. This is the 2015 VSV index case for Wyoming.

On July 30, 2015, the National Veterinary Services Laboratories (NVSL) in Ames, Iowa confirmed a finding of vesicular stomatitis virus (VSV) infection (New Jersey serotype) from a premises in Pennington County, South Dakota. Two horses from the premises met the case definition of infection with compatible clinical signs and positive complement fixation antibody titers. This is the 2015 VSV index case for South Dakota.

Although all VSV-affected premises had initially been released from quarantine in Utah as of May 14, 2015, on August 3, 2015, the National Veterinary Services Laboratories (NVSL) on Plum Island, NY subsequently confirmed a finding of vesicular stomatitis virus (VSV) infection (New Jersey serotype) from a cattle premises in San Juan County, Utah. One Jersey cow from the premises met the case definition of infection with compatible clinical signs and positive virus isolation. Based on this confirmation, Utah was added back to the list of currently VSV-affected states.
