

2015 Vesicular Stomatitis Virus (VSV) Situation Report – November 4, 2015

Information current as of 10:00 am MDT, 11/4/2015

Updated information in blue ink

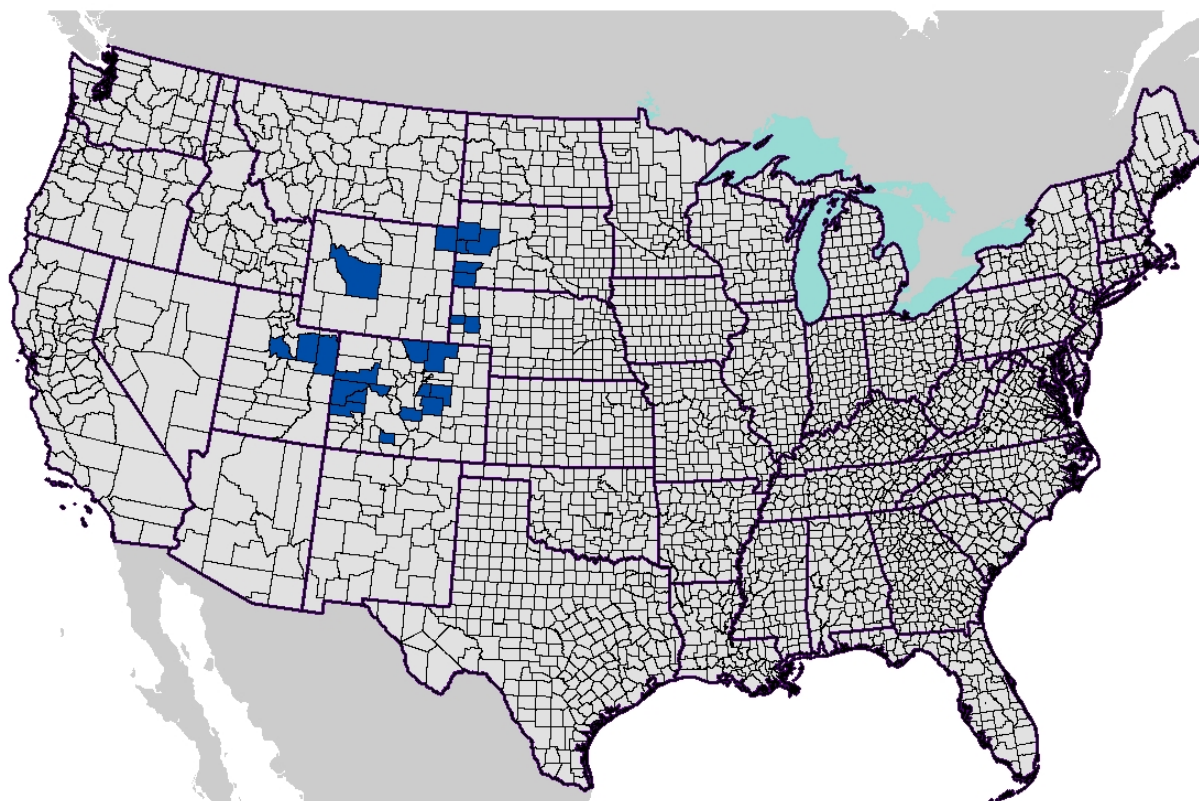

Critical New Information

- **Thirty-seven (37)** new VSV-confirmed (New Jersey serotype) and/or suspect premises have been identified and quarantined since the last situation report (10/28/15).
- **Newly affected counties** have been identified in:
 - **Utah** (Utah County)
- Since the start of the outbreak, **seven hundred fifty-nine (759)** VSV-affected premises (New Jersey serotype) have been identified and quarantined in 8 states (Arizona, Colorado, Nebraska, New Mexico, South Dakota, Texas, Utah, and Wyoming).
- Currently, there are **one hundred seventeen (117)** affected premises remaining under quarantine in **5** states (Colorado, Nebraska, South Dakota, Utah, and Wyoming).

Summary of the Outbreak

The 2015 VSV outbreak in the United States began April 29, 2015. To date, a total of **seven hundred fifty-nine (759)** VSV-affected premises (New Jersey serotype) have been confirmed or suspected in eight (8) U.S. states; Arizona (36 premises in 3 counties), Colorado (**389** premises in 32 counties), Nebraska (**34** premises in 6 counties), New Mexico (52 premises in 13 counties), South Dakota (**50** premises in 7 counties), Texas (3 premises in 3 counties), Utah (**54** premises in **8** counties), and Wyoming (**141** premises in 10 counties). Currently, there are **117** premises remaining under quarantine in **5** states (Colorado, Nebraska, South Dakota, Utah, and Wyoming).

New Confirmed/Suspect Premises

Since the last situation report (10/28/15), the following **thirty-seven (37) new VSV-confirmed (New Jersey serotype) and/or suspect premises** have been identified and quarantined:

Colorado (9 new confirmed, 16 new suspect premises)

- Delta County – 1 new suspect premises
- Douglas County – 1 new suspect premises
- Elbert County – 3 new confirmed positive, 2 new suspect premises
- El Paso County – 2 new confirmed positive, 8 new suspect premises
- Fremont County – 1 new confirmed positive premises
- Garfield County – 2 new confirmed positive, 2 new suspect premises
- Mesa County – 1 new suspect premises
- Montrose County – 1 new confirmed positive premises
- Weld County - 1 new suspect premises

Nebraska (1 new confirmed premises)

- Morrill County – 1 new confirmed positive premises

South Dakota (2 new confirmed premises)

- Fall River County – 1 new confirmed positive premises
- Lawrence County – 1 new confirmed positive premises

Utah (1 new confirmed, 5 new suspect premises)

- Uintah County – 5 new suspect premises
- Utah County (new affected county) – 1 new confirmed positive premises

Wyoming (3 new suspect premises)

- Fremont County – 3 new suspect premises

New Quarantine Releases

Quarantined premises are eligible for release 14 days after the onset of lesions in the last affected animal on the premises. Since the last situation report (10/28/15), the following **fifty-one (51)** premises have been **released from quarantine**:

Colorado (31 premises released)

- Adams County – 1 premises released
- Boulder County – 1 premises released
- Broomfield County – 1 premises released
- Delta County – 1 premises released
- Douglas County – 1 premises released
- El Paso County – 5 premises released
- Fremont County – 10 premises released
- Garfield County – 5 premises released
- La Plata County – 1 premises released
- Mesa County – 1 premises released
- Montrose County – 1 premises released
- Morgan County – 1 premises released
- Weld County – 2 premises released

Nebraska (3 premises released)

- Garden County – 1 premises released
- Lincoln County – 1 premises released
- Scotts Bluff County – 1 premises released

New Mexico (2 premises released)

- Bernalillo County – 1 premises released
- Valencia County – 1 premises released

Utah (6 premises released)

- Carbon County – 2 premises released
- Duchesne – 1 premises released
- Emery County – 1 premises released

- Uintah County – 2 premises released

Wyoming (9 premises released)

- Albany County – 1 premises released
- Fremont County – 8 premises released

Map 2. VSV Cumulative: Counties with Premises Quarantined April 29, 2015-present

Background

On April 29, 2015, the National Veterinary Services Laboratories (NVSL) in Ames, Iowa, confirmed a finding of vesicular stomatitis virus (VSV) infection (New Jersey serotype) on a premises in Grant County, New Mexico. One horse on the premises has met the case definition of infection with compatible clinical signs and a four-fold change in positive complement fixation antibody titers. This is the 2015 VSV index case for the United States.

On May 1, 2015, the National Veterinary Services Laboratories (NVSL), confirmed findings of vesicular stomatitis virus (VSV) infection (New Jersey serotype) on premises in Maricopa County, Arizona and Kane County, Utah. Three horses on two premises in Maricopa County, Arizona met the case definition of infection with compatible clinical signs and positive complement fixation antibody titers. One mule on a premises in Kane County, Utah met the case definition of infection with compatible clinical signs and positive virus isolation. The equids involved in the Kane County, Utah case had moved from Arizona just prior to identification of clinical signs. These are the 2015 VSV index cases for Arizona and Utah, respectively.

On May 18, 2015, the National Veterinary Services Laboratories in Ames, Iowa confirmed a finding of VSV infection (New Jersey serotype) on a premises in Pecos County, Texas. Two horses and a mule on the premises met case definition of infection with compatible clinical signs and positive complement fixation antibody titers. This is the 2015 index case of VSV for Texas.

On July 2, 2015, the National Veterinary Services Laboratories (NVSL) in Ames, Iowa confirmed findings of VSV infection (New Jersey serotype) on three (3) premises located in Colorado; one equine premises in Delta County, Colorado and two equine premises in Montrose County, Colorado. Two horses and two mules on the three premises met case definition of infection with compatible clinical signs and positive complement fixation antibody titers. These are the 2015 index cases of VSV for Colorado.

As of July 7, 2015, all VSV-affected premises were released from quarantine in Texas.

On July 22, 2015, the National Veterinary Services Laboratories (NVSL) in Ames, Iowa confirmed a finding of vesicular stomatitis virus (VSV) infection (New Jersey serotype) from a premises in Laramie County, Wyoming. One horse from the premises has met the case definition of infection with compatible clinical signs and positive virus isolation. This is the 2015 VSV index case for Wyoming.

On July 30, 2015, the National Veterinary Services Laboratories (NVSL) in Ames, Iowa confirmed a finding of vesicular stomatitis virus (VSV) infection (New Jersey serotype) from a premises in Pennington County, South Dakota. Two horses from the premises met the case definition of infection with compatible clinical signs and positive complement fixation antibody titers. This is the 2015 VSV index case for South Dakota.

Although all VSV-affected premises had initially been released from quarantine in Utah as of May 14, 2015, on August 3, 2015, the National Veterinary Services Laboratories (NVSL) on Plum Island, NY subsequently confirmed a finding of vesicular stomatitis virus (VSV) infection (New Jersey serotype) from a cattle premises in San Juan County, Utah. One Jersey cow from the premises met the case definition of infection with compatible clinical signs and positive virus isolation. Based on this confirmation, Utah was added back to the list of currently VSV-affected states.

On September 10, 2015, the National Veterinary Services Laboratories in Ames Iowa confirmed a finding of vesicular stomatitis virus (VSV) infection (New Jersey serotype) from a premises in Scotts Bluff County, Nebraska. Three horses from the premises have met the case definition of infection with compatible clinical signs and positive virus isolation. This is the 2015 VSV index case for Nebraska.

Although all VSV-affected premises had initially been released from quarantine in Arizona as of July 15, 2015, on September 14, 2015, the National Veterinary Services Laboratories (NVSL) in Ames, Iowa subsequently confirmed a finding of vesicular stomatitis virus (VSV) infection (New Jersey serotype) from an equine premises in Apache County, Arizona. One horse from the premises met the case definition of infection with compatible clinical signs and positive complement fixation antibody titer. Based on this confirmation, Arizona was added back to the list of currently VSV-affected states.

As of September 18, 2015, all VSV-affected premises were released from quarantine in Arizona.
