

## **Import Alert: Newcastle Disease Restrictions for Avian Commodities Originating from or Transiting Through the Canton of Jura, Switzerland**

**Issuance Date: March 23, 2022**

**Effective date: March 14, 2022**

Effective immediately, and until further notice, the U.S. Department of Agriculture's Animal and Plant Health Inspection Service (APHIS) Veterinary Services (VS) is adding the Canton of Jura, in Switzerland, to the list of countries APHIS considers affected with Newcastle disease. All avian, including hatching eggs, from the Canton of Jura, will be required to go through a 30-day quarantine upon U.S. arrival. The type of quarantine (federal, private, or home) may vary, but must be specified on the import permit. Except for the Cantons of Zürich and Jura, all other Cantons in Switzerland are considered free from Newcastle disease; avian hatching eggs from those areas may be imported without 30-day quarantine. All other avian types would be required to enter 30 days of quarantine.

Fresh, unprocessed shell/table eggs, and other egg products void of the shell (i.e., liquid eggs, dried egg whites) originating from or transiting through the Canton of Jura, imported as cargo, are prohibited unless they are accompanied by an appropriate APHIS table egg certification.

Processed avian products and byproducts for personal use, including egg/egg products, which originated from or transited through the Canton of Jura, in passenger baggage must:

- Have a thoroughly cooked appearance.
- Be shelf-stable as a result of APHIS-approved packaging and cooking (i.e., packaged in hermetically sealed containers and cooked by a commercial method after such packing to produce articles that are shelf-stable without refrigeration); and
- Be accompanied by an APHIS import permit and/or government certification confirming that the products/byproducts were treated according to APHIS requirements.

Unprocessed edible avian products and byproducts, including hunter-harvested meat, originating from or transiting through the Canton of Jura will not be permitted to enter the United States.

Processed edible avian products and byproducts originating from or transiting through the Canton of Jura, imported as cargo, must be accompanied by an APHIS import permit and/or government certification confirming that the products/byproducts were treated according to APHIS requirements.

Inedible avian commodities (other than hunting trophies) from the Canton of Jura must have a VS import permit as part of the entry documentation. Hunting trophies must be consigned to an APHIS-approved taxidermy establishment.

These restrictions will be updated as additional epidemiological information is obtained. Current information is available on the [APHIS website](#).
