Veterinary Health Certificate for the Import of Live Fish, Fertilized Eggs, or Gametes of Spring Viremia of Carp (SVC) Susceptible Species from Taiwan into the United States of America

I, the undersigned official veterinarian of the competent authority, certify that the live animals described above meet the following conditions:

1. Spring Viremia of Carp (SVC):
   a. The facility of origin participates in an ongoing Spring Viremia of Carp (SVC) monitoring program for species susceptible to SVC, by testing twice annually for a minimum of two (2) consecutive years, with at least three (3) months between tests. AND
   b. Populations were tested at a ninety-five (95) percent confidence and two (2) percent assumed prevalence level, and found negative for SVC. AND
   c. Sample collection was done at times when water temperatures are conducive to detecting SVC virus. AND
   d. Samples were collected by an official veterinarian, or certifying official, representing the Competent Authority. AND
   e. Cell cultures were incubated on epithelioma papulosum cyprinid (EPC) or Fathead minnow (FHM) cell lines at fifteen (15) to twenty-five (25) degrees Celsius, with at least two (2) serial passages and evaluation of cytopathic effect (CPE) for a minimum of seven (7) days after each passage. All testing results were negative for SVC.

2. The consignment was inspected by a licensed veterinarian of the exporting country’s Competent Authority within seventy-two (72) hours of shipment, and found to be free of any clinical evidence of SVC disease.

3. Shipping Containers:
   a. All shipping containers are either new, OR
   b. Have been cleaned and disinfected according to protocols listed in the interim rule. (*NOTE: If containers are not new, then details of cleaning and disinfection should be included on EITHER the export health certificate OR a separate Cleaning and Disinfection certificate to accompany the shipment).

After the animal inspection, this health certificate is valid for seventy-two (72) hours.
