Second Set Environmental Collection Information Sheet

National Animal Health
Monitoring System

2150 Centre Ave, Bldg B
Fort Collins, CO 80526

Form Approved
OMB Number 0579-0205
Approval expires: 4/30/10

A subset of operations taking environmental samples will have an additional set of manure/slurry collected at the same time from the same areas and sites.

Your Coordinator will explain the collection schedule for environmental samples.

This bag contains the materials you will need to collect these additional samples.

- 6 50ml conical tubes
- 6 Labels
- 1 FedEx airbill addressed to ARS in Athens, GA

When instructed to collect a second set of environmental samples, you will fill both a whirlpak bag and a 50ml conical tube from the same 6 different sites within an area. This will be done at 6 different areas on the operation.

The labels used for the whirlpak bags will have the Kit number. Write this Kit number on these labels

Make sure the sample numbers for the tubes match those on the whirlpaks.

Secure the cap, clean off the tube, label (filled in with correct information), and place the 6 tubes in this self-locking bag to contain leakage during shipment.

Place the pink copy of the Environmental Collection Record with the samples and ship on ice to ARS in Athens, GA, using the enclosed FedEx airbill.
