

EMRS2

Trace Movement Flow

Trace Movement Flow

- EMRS2 allows you to keep track of all traces associated with an investigation
- EMRS2 allows for adding additional traces or movements to the same or other premises later on *within the current investigation.*

A Trace Investigation May Have Multiple Movements Associated With It:

- **Individual animals or groups that are identified.**
 - **Note: groups of animals that are unidentified do not require a movement associated with the Trace**
- **These animals/groups may be moving on different dates to different premises within or out of your state.**

Trace Flow

- Affected or infected herds require a premises status to designate them “positive” before index traces can be created except for slaughter and market tracebacks.

Trace Flow

Items to Trace Options

- Individually Identified Animals
- Animals without ID
- Identifiable Animal Groups
- Groups of Animals
- Milk
- Eggs
- Feed
- Hay/Forage
- Other

Create trace:Investigation: Items being Traced.

Origin Trace Priority
Regular

Items to Trace
1

Item to Trace. Select Carefully- will determine selections later!
Individually Identified Animals

Select Primary Species if animal (cattle, horses, sheep, goats, Ect)

Additional Item Description

Tip
This will be inherited to the movement and will determine if you can add individual animals or groups of animals on the movement or trace. They cannot be mixed so you must select one or the other, if both individuals and groups were sent between two premises use separate traces.

Individually Identified animals will require a movement and an animal record be associated to the trace. Animals without ID use just a trace without movements

Trace Flow

- Trace item options on Trace (previous slide):
 - Individually Identified Animal
 - Use when tracing individual animals with unique ID
 - REQUIRES at least one movement w/at least one animal on the trace to transfer the trace
 - Animals without ID
 - Use when tracing groups without ID and animals that were commingled.
 - Identifiable Animal Groups
 - Use when tracing identifiable animal lots, such as poultry groups
 - Requires at least one movement and one group record on the trace to transfer the trace
 - Groups of Animals
 - Use (can also use Animals w/o ID) when tracing multiple shipments over several weeks, such as when animals are moved to slaughter.
 - Explain and enter totals, and attach any records and explanations

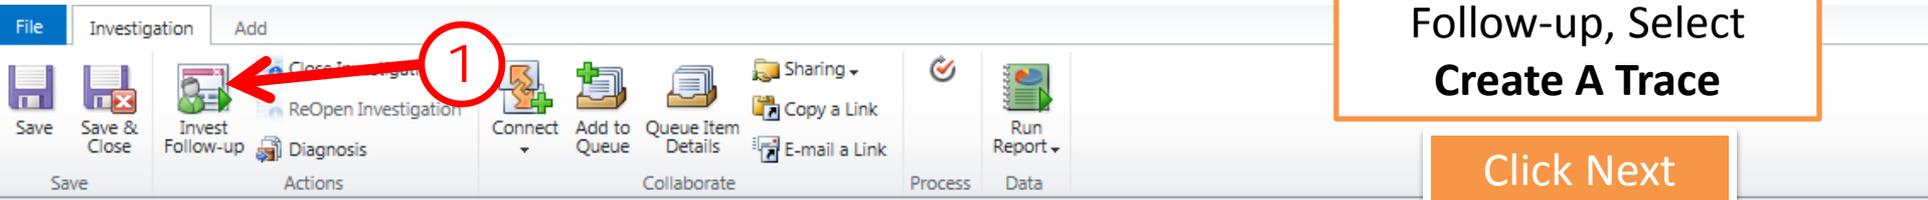

**The Reason For All The Steps In EMRS2
Is To Account For
All Trace Animals Associated With An Investigation:**

- **individual animals that are identified or unidentified,**
- **groups of animals that may be identified or unidentified,**
- **and, these animals/groups may be moving on different dates to different premises within or out of your state.**
- **EMRS2 now replaces previous VS trace forms for disease investigations (*VS Form 6-4B, etc.*)**

A screenshot of the 'Add Follow-ups' dialog box. The dialog title is 'Add Follow-ups' and the subtitle is 'Investigation: Add Follow-ups: What do you want to do?'. The main area contains a list of options under the heading 'What do you want to do with this investigation? IV:1413:14'. The options are: 'Create an Exam', 'Create a Prem Status', 'Create an Appraisal', 'Create a Euthanasia and Disposal', 'Create a Cleaning and Disinfection', 'Create a Permit', 'Create a Restricted Movement (1-27)', 'Create a Trace' (which is selected with a radio button), 'Create an Epi Interview', 'Create a Communication Activity/ Inspection Task', 'Create a New Investigation', and 'Delete this Investigation'. To the right of the list is a 'Tip' section with details about the incident and investigation record. At the bottom of the dialog, there are 'Help', 'Summary', 'Next', and 'Cancel' buttons. The 'Next' button is circled in red with the number '3'. A red arrow with the number '2' points to the 'Create a Trace' option.

Select **Type of Trace Segment** you are creating (normally Index Trace; Placeholder trace is selected only under special circumstances)

Add Follow-ups

Create New Trace: Invest: Creating Index or Placeholder Trace segment?

Create a new trace segment for this investigation (IV:1413:14).
Normally you will only create a new index trace from an infected/affected premises or a slaughter Traceback at the slaughter plant; otherwise you would continue or split a trace you received from another premises, unless you are creating a placeholder trace starting somewhere in the traseline other than the index herd.

Which type of trace segment are you creating?

- Index trace from an infected/affected herd.
- Placeholder trace somewhere else in the traseline.

If this is a placeholder trace being created somewhere other than the index premises and you know the index premises and have access you can select it here to link to this segment.

Tip

Incident: [TB Tracing](#)
Site: [Oklahoma](#)
Investigation: [IV:1413:14](#)
Business: [MD Cattle](#)
Premises: [005PMOX](#)

Index segments will show the current premises as the index premises, current trace segment as the traseline and will not have a link to a previous trace since they should be the first in the series.

Placeholder segments will not have
