New Firm Informational Packet for Diagnostic Test Kits

Background Information

The purpose of this packet is to give an overview of the licensing process to new firms unfamiliar with the process of licensing a diagnostic test kit. The information should be viewed only as an introduction, and not a list of all possible requirements. Each product will have unique characteristics that may require its own unique studies to assure the final licensed product is safe and effective.

Veterinary biologics producers in the United States must have both a U.S. Veterinary Biologics Establishment License for their facility and a U.S. Veterinary Biological Product License for each product produced in their facility. To qualify for an Establishment License, an applicant must qualify for at least one Product License. The Establishment and Product Licenses are issued simultaneously.

The Center for Veterinary Biologics (CVB) consists of two operational units: Policy, Evaluation, and Licensing (PEL) and Inspection and Compliance (IC). These units closely interact during the prelicensing stage of new products as well as after licensing. The PEL unit is responsible for licensing of new products and maintenance of products once licensed. Licensing of new products consists of review of Outlines of Production, review of study protocols and associated reports/data, laboratory testing, and issuing Establishment and Product licenses. The IC unit is responsible for inspections of new facilities (including review of blueprints, plot plans, and legends), product marketing release, initiating investigations when appropriate, conducting periodic firm inspections, responding to issues related to product performance, and implementing our pharmacovigilance program.

Please be aware that CVB relies on formal, signed paper copy documents to be submitted by your firm. Email, meetings, and phone conversations are considered informal and non-binding communication. CVB will formally respond with our decisions and recommendations concerning licensure by paper copy. There is a specific process for communicating with CVB which also contains an introduction to the licensing process described in Veterinary Service Memorandum (VSM ) 800.50: Basic License requirements and guidelines for submitting materials in support of licensure:

A complete set of biologics-related guidelines, memorandums, notices, and related forms are available online at the Veterinary Biologics website:

The Submission Compliance Guide: Submitting Complete and Accurate Paper License Applications, Outlines, and Labels provides step wise directions on making these submissions.

The CVB website describes the thorough and extensive licensing process in detail. One informal resource that helps bring together the overlapping guidance documents is the CVB Policy, Evaluation and Licensing - Reviewer Manual and is available on the CVB website at:

There are also several organizations outside of the USDA that may be used to assist in the licensing process. Two professional organizations, Animal Health Institute (AHI) and Association of Veterinary Biologics Companies (AVBC), have members from biologics firms and consultants which may be able to assist new firms through the licensure process. Additionally, the Institute for International Cooperation in Animal Biologics (IICAB) in cooperation with the CVB provides week-long training annually on U.S. veterinary biologics licensing requirements.

The following list is general guidance for all veterinary biologics and should not be considered an all-inclusive list. In addition to these general requirements there are also diagnostic test kits specific requirements listed later in this document. Formal communication between your firm and your CVB Reviewer will determine the appropriate licensing pathway for your unique product. However, it is the firm’s obligation to understand and meet all the licensing requirements.

I. The initial submission to the CVB is an introduction of your company and product. The goal is to determine if your product falls within CVB regulatory jurisdiction. The submission should include:

- A cover letter with the following information:
  - Brief description of the product including mechanism of action of the test
  - Animal species and sample type the kit is designed for
  - Proposed label claim (what you propose the product will do)
  - Names and addresses of all legal entities (not individual persons) involved in the manufacture of the product
  - Supporting publications

- If it is determined your product falls under CVB jurisdiction an individual Reviewer will be assigned to your firm. See the Memorandum of Understanding between the APHIS and the FDA for additional details on jurisdiction:
II. Core documents required prior to any study submissions

- **APHIS Form 2001 Application for United States Veterinary Biologics Establishment License:**
  

  ➢ Articles of Incorporation
  The following documents associated with the APHIS Form 2001 may be submitted at a later date:
  ➢ Water Quality Statement verifying the effluent waste for the facility meets local regulatory standards
  ➢ Facility documents; see *VSM 800.78 Preparation and Submission of Facilities Documents*:
    

- **APHIS Form 2003 Application for United States Veterinary Biological Product License:**
  

- For imported test kits, an APHIS Form 2005 for “General Sale and Distribution,” is used in place of the APHIS Form 2001 and 2003. This is because the test kit will be “permitted” and not “licensed.”
  See more detailed information in *9 CFR 104 PERMITS FOR BIOLOGICAL PRODUCTS* and *9 CFR 104.5 Products for distribution and sale*

  It is important to realize that a separate “Research and Evaluation” permit which also uses the APHIS Form 2005 is required before bringing test kits into the US for evaluation. Information on how to obtain an importation permit is found at *9CFR 104.4 Products for research and evaluation*
An importation SIF is required prior to bringing the test kits into the US. This information is found in: Summary Information Format for the Importation of Veterinary Biological Products into the United States.

APHIS Form 2007 Qualifications of Veterinary Biologics Personnel:

• An Outline of Production submitted with APHIS Form 2015 Transmittal of Labeling or Outlines:

9 CFR 114.8: Outline of Production required and 9 CFR 114.9(f): Outline of Production guidelines:

Reviewer manual Chapter 4 Outlines of Production and Special Outlines:
The safety of the components of the kit must meet VSM 800.51: Additives in Administered Animal Biological Products

III. The following are the core scientific submissions and their associated guidance documents. Pivotal studies required below typically begin with the submission of a protocol as described in VSM 800.200 General Licensing Considerations: Study Practices and Documentation. The final reports for these studies will need to be accompanied by properly formatted electronic data (CVB Data Guide).

- Core guidance on developing a diagnostic test is found in VSM 800.73 Diagnostic Test Kit Validation and within the Reviewer Manual

IV. Shipment of your experimental biologic
Because the unlicensed product is considered to be experimental in nature, authorization to ship the product for conduct of efficacy, safety, or other studies must be authorized by the CVB. Guidance for shipment of product for these studies is under 9 CFR 103.3. Shipment of Experimental Biological Products.

See VSM 800.67 Shipment of Experimental Biological Products:

An APHIS Form 2071 Application for Authorization to Ship Experimental Veterinary Biological Products may be used to request authorization to ship experimental product and may be accessed at:

Note: if the product is a recombinant product, an evaluation of your SIF is required well before any movement of the product outside of containment would be allowed.

V. Prelicense serial testing

- CVB will require confirmatory testing of your three prelicense serials.
  VSM 800.50: Basic License requirements and guidelines for submitting materials in support of licensure:

  APHIS 2072 Application for Authorization to Ship Biological Product Samples for Confirmatory Testing by APHIS

VI. Prelicense facility inspection

- Guidance regarding the CVB-IC prelicensing inspections process which is initiated by your reviewer is at:

  Inspection and Compliance Manual Chapter 3 Process for Prelicense Inspection Requests

  VSM 800.91 Categories of Inspection for Licensed Veterinary Biologics Establishments describes important categories evaluated during the inspection process:

General guidance on the authority for inspections and record keeping requirements are found in 9 CFR 115 Inspections and 9 CFR 116 Records and Reports

Note: a prelicensing inspection must be completed by CVB-IC prior to issuance of an establishment license or permit. If it has been longer than two years since the prelicensing inspection, a second prelicensing inspection will most likely need to be completed prior to issuance of the establishment license or permit.

VII. Becoming Portal Enabled

- The NCAH Portal is a valuable communication tool for both the firm and CVB. However, the CVB receives numerous inquiries from new establishments each year, with only a subset of those proceeding beyond the initial inquiry, so initial communication is via paper letters and not via the electronic Portal. Access to submit submissions via the NCAH Portal Guidance for CVB Submitters may be considered for prelicense firms, as described below:

VIII. Final submissions prior to licensure

- Final labeling materials guidance:

See 9 CFR 112 Packaging and labeling:
https://www.ecfr.gov/cgi-bin/text-idx?gp=&SID=4b71249719aef16788f85e60ab1873fe&mc=true&tpl=/ecfrbrowse/Title09/9CIsu_bchapE.tpl

See VSM 800.54 Guidelines for the Preparation and Review of Labeling Materials:

Reviewer Manual Chapter 4 Labels:

See information on advertising that is not part of labeling in VSM 800.95 Advertising and Promotional Materials
