SUBJECT: Issuance of a Conditional License for Moraxella Bovoculi Bacterin

The Animal and Plant Health Inspection Service (APHIS) has issued a conditional United States Veterinary Biological Product License to Addison Biological Laboratory, Inc., Establishment No. 355, Fayette, Missouri, for the manufacture and distribution of Moraxella Bovoculi Bacterin.

A veterinary biological product regulated under the Virus-Serum-Toxin Act must be shown to be pure, safe, potent, and efficacious before a veterinary biological product license may be issued. The regulations in title 9, Code of Federal Regulations, part 102, regarding the licensing of veterinary biological products provide that a conditional veterinary biological product license may be issued to meet an emergency condition, limited market, local situation, or special circumstance. The special circumstance addressed here is the first availability of a Moraxella bovoculi vaccine against pinkeye or infectious bovine keratoconjunctivitis approved for use in cattle.

Conditionally licensed products are required to be pure and safe, and have a reasonable expectation of efficacy. This conditional license was issued on the basis that the licensee has demonstrated that the product has a reasonable expectation of efficacy. Safety of the product has been established through a safety study. APHIS will evaluate their progress throughout the next year. The conditional license will expire 1 year from the date of the license.
