**INSPECTION REPORT**

**KENNELWOOD, INC.**

**Customer ID: 565**  
**Certificate: 33-R-0103**

**1913 N. STALEY ROAD**  
**CHAMPAIGN, IL 61821**

**Site: 001**  
**KENNELWOOD, INC.**

**Inspection**  
**Type: ROUTINE INSPECTION**  
**Date: JAN-30-2003**

**2.30**  
**REGISTRATION.**

Inspection was completed on January 30 and February 4, 2003.

Previous Noncompliant Items that have been corrected:

**3.1(a) and (c)**

Walls where rodents had been chewing on them have been repaired and a rodent control program (pest control boxes were observed) is in place.

New doors have been purchased and are being installed to correct the seal problem.

New water lines have been installed in all the dog runs in Building 1.

Dog resting platforms have been repaired or replaced.

**3.2 (b) and (d)**

Ventilation in Building 2 has been increased, by the addition of fans, thus reducing odor problems.

\*\*\*Chipping paint is still observed in different areas throughout the facility. Painting was started in the fall, but not completed. Painting will begin again when the weather permits.

**2.33 (b)(3)**

**ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE.**

(3) Daily observation of all animals to assess their health and well-being; Provided, however, That daily observation of animals may be accomplished by someone other than the attending veterinarian; and Provided, further, That a mechanism of direct and frequent communication is required so that timely and accurate information on problems of animal health, behavior, and well-being is conveyed to the attending veterinarian

\*\*\*During the inspection, one cat (Tinkerbelle) was found to have claws so long that they had grown into the foot pads. Other cats were noted to have claws long enough that they should be trimmed. Also, another cat (Stimpy) was noted to have an ear hematoma that was very recent. Each day every animal must be individually checked for such problems, and appropriate veterinary care must be sought. In the case of the two animals mentioned, they were immediately taken to the attending veterinarian for treatment. However, all care-takers must be instructed to carefully observe the animals daily and report any problems immediately.

**INSPECTION REPORT**

Correct by: Immediately

**3.1 ( e )**

**HOUSING FACILITIES, GENERAL.**

3.1 (e) All open supplies of food and bedding must be kept in leakproof containers with tightly fitting lids to prevent contamination and spoilage.

...Substances that are toxic to the dogs or cats but are required for normal husbandry practices must not be stored in food storage and preparation areas, but may be stored in cabinets in the animal areas.

\*\*\*In Building 1, there are open bags of dog food that were used in a previous study and are not being currently used. These bags have been taped shut and are on a pallet, however, in order to prevent contamination and spoilage, the food must be placed in leakproof containers with tight fitting lids.

Also in Building 1, cleaning agents, including Lime-Off are being stored on an open shelf in the food preparation area. To ensure there is no possibility of food contamination, these types of compounds must be stored in cabinets in other areas.

Correct by: February 10, 2003

**3.6 ( a ) ( 1 )**

**PRIMARY ENCLOSURES.**

(1) Primary enclosures must be designed and constructed of suitable materials so that they are structurally sound. The primary enclosures must be kept in good repair...

\*\*\*In Building 1, one of the dog runs has a concrete block in it to hold the guillotine door closed. Concrete blocks are porous and cannot be cleaned appropriately. The rails for the door need to be repaired so a block is not needed to keep the door closed. Also, several of the doors in the other runs are significantly cracked and need to be replaced.
