RE: Regulatory Status Review of pennycress developed using genetic engineering for reduced erucic acid and reduced fiber in seeds

Dear Dr. Hagedorn:

4700 River Road
Riverdale
MD 20737

Thank you for your letter dated March 10, 2022, requesting a Regulatory Status Review (RSR) for pennycress developed using genetic engineering (modified pennycress). In your letter, you described that the pennycress was modified to impart lowered erucic acid in seeds via reduction or loss of *fatty acid elongation 1 (FAEI)* and to confer lowered fiber in seeds via reduction or loss of *transparent testa 8 (TT8)*.

The Plant Protection Act of 2000 (7 U.S.C. §§ 7701 et seq.) provides USDA authority to oversee the detection, control, eradication, suppression, prevention, or retardation of the spread of plant pests to protect agriculture, the environment, and the economy of the United States. USDA, through the Animal and Plant Health Inspection Service (APHIS), regulates the “Movement of Organisms Modified or Produced through Genetic Engineering” as described in 7 CFR part 340.

Consistent with 7 CFR 340.4, APHIS reviewed your modified pennycress to determine whether it is subject to the regulations in 7 CFR part 340. Specifically, APHIS reviewed the modified pennycress to determine whether there is a plausible pathway by which the pennycress would pose an increased plant pest risk relative to the plant pest risk posed by an appropriate pennycress comparator. Based on information you provided, publicly available resources, and APHIS’ familiarity with pennycress and knowledge of the trait, phenotype, and mechanism of action, APHIS considered the (1) biology of nonmodified pennycress and its sexually compatible relatives; (2) the trait and mechanism-of-action of the modification; and (3) the effect of the trait and mechanism-of-action on the (a) distribution, density, or development of the plant and its sexually compatible relatives, (b) production, creation, or enhancement of a plant pest or a reservoir for a plant pest, (c) harm to non-target organisms beneficial to agriculture, and (d) weedy impacts of the plant. APHIS did not identify any plausible pathway by which your modified pennycress would pose an increased plant pest risk relative to comparator pennycress plants. APHIS has determined your pennycress is unlikely to pose an increased plant pest risk relative to its comparators. Once APHIS determines that a plant product is unlikely to pose an increased plant pest risk relative to its comparator and, thus, is not a plant pest or a plant that requires regulation because it is capable of introducing or disseminating a plant pest, APHIS has no authority to regulate it under 7 CFR part 340. Accordingly, your pennycress is not subject to the regulations under 7 CFR part 340. APHIS’ determination that this modified plant is not subject to the regulations extends to any progeny of the modified plant that is derived from crosses with other non-modified plants or other modified plants that are also not subject to the regulations in 7 CFR part 340.

Please be advised that APHIS’ decision applies to the pennycress developed using genetic engineering precisely as described in your letter. If at any time you become aware of any information that may affect our review of your modified pennycress, including, for example, new information that shows the trait, phenotype, or mechanism of action is different than described in your letter, you must contact APHIS for further review of the plant at RSRrequests@usda.gov.

Please be advised that your plant product, while not regulated under 7 CFR part 340, may be subject to APHIS Plant Protection and Quarantine (PPQ) permit and/or quarantine requirements. For further information, you may contact the PPQ general number for such inquiries at 877-770-5990. Your plant product may also be subject to other regulatory authorities such as the U.S. Environmental Protection

Agency (EPA) or the Food and Drug Administration (FDA). Please contact EPA and FDA to enquire about the regulatory status of your product.

Sincerely,

A handwritten signature in black ink, appearing to read 'BJ', with a stylized flourish extending to the right.
