# Consumer Product Testing Co.

November 15, 2012

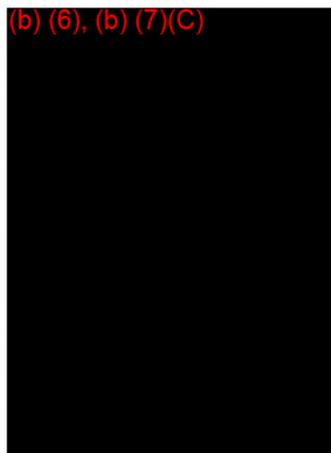

Facility Registration Number: 22-R-0069

We have listed 4 guinea pigs in Column E of APHIS Form 7023. The animals did not exhibit physical responses normally associated with pain. Rather, they exhibited maximum irritation scores. This facility did not feel that the use of analgesics, etc. would have adversely affected the procedure, but rather analgesics were not administered for the reason indicated below.

The guinea pigs were on a sensitization study using an ISO topical application protocol.

The guinea pigs exhibited maximum scores during the induction phase. Due to an oversight, on one day the animals were not provided an analgesic as prescribed by the specific protocol in use. The following day, the oversight was noted and the animals were administered the appropriate analgesic.
