

UNITED VACCINES, INC.

30 November 2012
 Registration Number: 35-R-0122

ADDENDUM #2 to ANNUAL REPORT OF RESEARCH FACILITY
 COLUMN E EXPLANATION

The animals listed in Column E were utilized for safety and potency testing of this firm's products as specified in the following 9 CFR sections:

Regulatory Justification		Description of Study	Species	Number
9 CFR	113.110(c)	<i>Clostridium botulinum</i> Type C Potency Test	Mink	63
	113.204(b)	Mink Enteritis Virus Potency Test	Mink	59

In addition, animal vaccination/challenge testing was performed for the following studies:

1. Pseudomonas Efficacy testing performed for the purpose of licensing of USDA Product Code 49A5.23, Mink Enteritis Vaccine, Killed Virus, Clostridium Botulinum Type C-Pseudomonas Aeruginosa Bacterin-Toxoid; required by APHIS-CVB: Number of Mink, 167.

Agencies that regulate the testing of biologics generally insist that these tests run their course without interference. In some instances, the symptoms may become protracted. In these cases, we do administer a euthanasia solution at an appropriate state to reduce pain and distress.
