Re: FOI request for the USDA APHIS Center for Veterinary Biologics

To Whom It May Concern:

I am writing to formally request details on adverse events reports pertaining to PreveNile, an equine vaccine for West Nile virus.

On April 28, Intervet Shering-Plough Animal Health issued a recall on all series of PreveNile one dose and PreveNile five dose. The company cited "increased incidents of adverse events."

JUN 03 2010

I am seeking details from USDA APHIS on those adverse events. In particular, I'd like to know what they were as well as numbers and years. The drug has only been out since 2006, so if I could have numbers of events reported per year that would be helpful.

I am especially interested in numbers of deaths related to the drug and any indication of symptoms prior to death.

I can be reached at

Thank you in advance for your time.
