# National Animal Health Monitoring System

Last Modified:

The National Animal Health Monitoring System (NAHMS) unit conducts national studies on the health and health management of U.S. domestic livestock, equine, aquaculture, and poultry populations. These studies are designed to meet the information needs of the industries associated with these commodities, as identified by people within those industries.

If you cannot reach any of the NAHMS content (for example, questionnaires, study reports, study dashboards, informational sheets, and informational graphics), contact us at [nahms@usda.gov](mailto:nahms@usda.gov), and we will be glad to assist you in getting access to the requested content.

## Data Confidentiality

NAHMS is committed to protecting the confidentiality of the information provided by participants in NAHMS studies. Only those collecting the data know the identity of respondents. No name or contact information is associated with individual data, and no data are reported in a way that could reveal the identity of a participant, as data are presented only in an aggregate manner.

To further protect respondents' information, NAHMS applied for, and in March 2012 received, recognition as a statistical unit under the Confidential Information Protection and Statistical Efficiency Act (CIPSEA). Enacted in 2002, CIPSEA provides a way for Federal agencies to collect statistical information and protect its confidentiality using the force of law.

The specific data protections given to a NAHMS study participant's data is described in detail in informed consent forms administered during the study. Additional information regarding NAHMS' CIPSEA status as well as annual CIPSEA reports are available below.
