

**Finding of No Significant Impact**  
**Mexican Fruit Fly Cooperative Eradication Program**  
**Zapata County, Texas**  
**Environmental Assessment**  
**July 2016**

U.S. Department of Agriculture's Animal and Plant Health Inspection Service (APHIS) prepared an environmental assessment (EA) analyzing alternatives for control of an outbreak of the Mexican fruit fly, *Anastrepha ludens* (Loew) (Mexfly), an exotic agricultural pest detected at actionable levels in Zapata County, Texas. APHIS' involvement in a Mexfly cooperative eradication program with Texas was triggered on June 29, 2016, with the confirmation of a Mexfly larva found on an citrus host in the community of San Ygnacio, Texas. The EA is incorporated by reference in this document, and is available from:

Raleigh, NC 27606

The EA for this program analyzed three alternatives: (1) no action, (2) quarantine and commodity certification, and (3) eradication. Each of these alternatives is associated with potential environmental consequences. APHIS selected the eradication program using an integrated pest management approach because of its capability to achieve eradication in a way that reduces the overall magnitude of potential environmental consequences.

APHIS reviewed the treatment areas and determined that the proposed program will have no effect on listed species or critical habitat. Should the program area expand, or a new species or critical habitat be listed that may occur in the program area, APHIS will revisit this determination and consult with the appropriate agency, as necessary. In addition, implementation of the preferred alternative is not expected to have any adverse effect on migratory birds or their flight corridors, or other nontarget species in the program area.

I find implementation of the proposed program will not significantly impact the quality of the human environment. I have considered and based my finding of no significant impact on the quantitative and qualitative risk assessments of the proposed pesticides, the analysis in the referenced EA, or on my review of the program's operational characteristics. In addition, I find the program has fulfilled consultation requirements associated with the human environment (including low-income and minority populations, children, and tribal, cultural, and historical resources). Lastly, because I have not found evidence of significant environmental impacts associated with this proposed program, I find an environmental impact statement does not need to be prepared and the program may proceed.
