Finding of No Significant Impact
Mediterranean Fruit Fly Cooperative Eradication Program
Solano County, California
Environmental Assessment
October 2017

The U.S. Department of Agriculture (USDA), Animal and Plant Health Inspection Service (APHIS), has prepared an environmental assessment (EA) that analyzes alternatives for control of an outbreak of the Mediterranean fruit fly (Medfly), Ceratitis capitata (Wiedemann), an exotic agricultural pest detected at actionable levels in the Fairfield region of Solano County, California. APHIS’ involvement in a Medfly cooperative eradication program with California was triggered on September 25, 2017, after the collection of multiple adult wild Medflies from Jackson and ChamP® traps, within 3 miles of one another, during a single fly life cycle. The EA is incorporated by reference in this document, and is available from:

USDA, APHIS, PPQ

Raleigh, NC 27606

The EA for this program analyzed three alternatives: (1) no action, (2) quarantine and commodity certification, and (3) eradication. Each of these alternatives is associated with potential environmental consequences. APHIS selected the eradication program using an integrated pest management approach because of its capability to achieve eradication in a way that reduces the overall magnitude of potential environmental consequences.

APHIS reviewed the program area for issues related to the Endangered Species Act, and determined that program activities will have no effect on listed species or critical habitat within the program area. In addition, the U.S. Fish and Wildlife Service indicated that they concurred with the APHIS determination that the program was not likely to adversely affect listed species or critical habitat. Should the program area expand, or a new species or critical habitat be listed that may occur in the program area, APHIS will revisit this determination and consult with the appropriate agency, as necessary. In addition, implementation of the preferred alternative is not expected to have any adverse effect on migratory birds or their flight corridors, or other nontarget species in the program area.

I find implementation of the proposed program will not significantly impact the quality of the human environment. I have considered and based my finding of no significant impact on the quantitative and qualitative risk assessments of the proposed pesticides, the analysis in the referenced EA, and on my review of the program’s operational characteristics. In addition, I find the program has fulfilled consultation requirements associated with the human environment (including low-income and minority populations, children, and Tribal, cultural, and historical resources). Lastly, because I have not found evidence of significant environmental impacts associated with this proposed program, I find an environmental impact statement does not need to be prepared and the program may proceed.
