

Guidance for containment evaluation of plant pathogens and noxious weeds permit applications when containment is required.

Movement	Type	Evaluation
Importation	1. Pure cultures and/or on host material of unknown and/or unidentified organisms.	Full
	2. Field-collected organisms: includes spore collections and/or "mixed infections" on plant material.	Full
	3. Pure cultures of identified exotic but not established organisms	Full/CAFE/none (depending on organism)
	4. Pure laboratory or commercial cultures of indigenous organisms.	CAFE/none (depending on organism)
	5. Importation from or of an organism whose distribution is contiguous with populations that occur naturally in the area into which the movement is proposed.	CAFE/none (depending on organism)
Interstate	6. Subsequent movement of organisms that were brought into the State under a Federal permit and organism/intended use would still trigger the need for a CF evaluation.	Full/ CAFE/none (depending on organism)
	7. Movement of a quarantine significant organism under official control from a regulated to a no regulated area.	Full
	8. Movement of an organism (not previously approved for environmental release) to an area where it does not presently occur (and where intended use determines the extent of research activities).	Full/CAFE

	9. Movement of a pure culture of an identified FOREIGN organism.	CAFE to none (depending on the organism);evaluated on a case-by –case basis
	10. Movement of unidentified field “mixed infections”	CAFE: (fungi/bacteria) None:(bacteria/viruses) T.B.D.
	11. Movement of an organism to an area where the organism and its host do not occur due to environmental constraints.	Evaluated on a case-by-case basis
	12. Lab and/or growth chamber grown obligate parasites (with or without soil or plant growth media) moving into an area where they already occur.	None
	13. Purified viruses from known repositories	None
	14. Pure cultures of fungi into a state where it is reported or contiguous state where it is reported.	None
	15. Microbial biocontrol agents with -E.P.A. registration.	None: Importation or Canada/Mexico contiguous population
Importation or interstate	16. Isolates returning to/ from reputable repositories.	None
	17. Movement directly for extraction of DNA	None
Intrastate	18. Movement of organisms that were brought into the State under a Federal permit and the organism/intended use would still trigger the need for a CF evaluation.	CAFE/Full
