DA-2011-29
June 1, 2011

SUBJECT: Expansion of the Quarantine Area for Citrus Black Spot (CBS) (*Guignardia citricarpa*) in Florida

TO: STATE AND TERRITORY AGRICULTURAL REGULATORY OFFICIALS

APHIS is issuing a revised Federal Order, effective immediately, which expands the quarantine area for the fungal pathogen, *Guignardia citricarpa*, (causal agent of CBS) in Florida. Based on the results of delimiting surveys, the quarantine area will expand by 6 sections in Collier County and 14 sections in Hendry County. These sections are in previously identified quarantined townships. The number of townships with quarantined areas remains at three for Collier County and four for Hendry. The Federal Order and APHIS-Approved Packinghouse Procedures for *Guignardia citricarpa* are attached for your reference.

CBS surveys conducted in 2010 established the initial quarantine areas in Collier County and Hendry County and surveys were conducted until the end of the harvest season. Surveys resumed in 2011 once fruit were present on host trees. Symptoms of CBS are most evident on mature fruit and typically remain latent on leaves with little to no symptom development until after the leaves die. CBS has not been detected outside of Collier and Hendry Counties in targeted CBS surveys as well as multi-pest surveys conducted by Florida Department of Agriculture and Consumer Services (Division of Plant Industry) and USDA's Plant Protection and Quarantine as part of the cooperative Citrus Health Response Program in Florida.

Fresh citrus fruit that is moved interstate from the CBS quarantine areas must be packed in commercial citrus packinghouses operating under compliance agreement with APHIS and the fruit must be processed using APHIS-approved methods. Citrus plant parts other than treated fresh fruit is prohibited from movement.

For additional information regarding the location of or the movement of fresh fruit from CBS quarantine areas in Florida, you may contact Leon Bunce, Eastern Region Program Manager at (919) 855-7360; or Lynn Evans-Goldner, National Program Manager at (301) 734-7228.

FEDERAL ORDER

Quarantine for *Guignardia citricarpa* Kiely Causal Agent of Citrus Black Spot (CBS)

DA-2011-29

June 2, 2011

The purpose of this Federal Order is to prevent the spread of the fungal plant pathogen, *Guignardia citricarpa* Kiely, the causal agent of Citrus Black Spot (CBS), through regulatory authority provided by Section 412(a) of the Plant Protection Act of June 20, 2000, as amended, 7 U.S.C. 7712(a), which authorizes the Secretary of Agriculture to prohibit or restrict the movement in interstate commerce of any plant, plant part, or article if the Secretary determines that the prohibition or restriction is necessary to prevent the dissemination of a plant pest within the United States.

The Administrator of the Animal and Plant Health Inspection Service (APHIS) considers it necessary, in order to prevent the dissemination of CBS, to establish restrictions on the interstate movement of certain regulated articles from the State of Florida as described in this Federal Order. This Federal Order updates and replaces Federal Order (DA-2011-13) issued March 8, 2011.

A. Quarantine Areas:

The Administrator will list as a quarantine area each State, or each portion of a State, that is within one mile of a site where CBS has been confirmed by an inspector to be present, in which the Administrator has reason to believe that CBS is present, or that the Administrator considers necessary to regulate because of its inseparability for quarantine area enforcement purposes from localities in which CBS has been found.

Less than an entire State will be designated as a quarantine area only if the Administrator determines that:

1. The State has adopted and is enforcing restrictions on the intrastate movement of the regulated articles that are substantially the same as those imposed by the Administrator on the interstate movement of regulated articles, except when regulated fruit moves intrastate from a quarantine area for fresh fruit packing or for processing into a product other than fresh fruit in accordance with this order; and
2. The designation of less than the entire State as a quarantine area will be sufficient to prevent the interstate spread of CBS.

The Administrator or an inspector may temporarily designate any non-quarantine area as a quarantine area. The Administrator will give a copy of this Order, along with a written notice for the temporary designation, to the owner or person in possession of the area to be established as a

quarantined area. Thereafter, the interstate movement of any regulated article from an area temporarily designated as a quarantine area will be subject to this Order. When feasible, this area will be added to the list of quarantine areas or the designation will be terminated by the Administrator or an inspector. The owner or person in possession of an area for which a quarantine designation is terminated will be given notice of the termination as soon as possible.

The following areas are designated as quarantine areas:

Florida

In Collier County: Sections 13 through 16, 20 through 29, and 33 through 36 in Township 47, Range 29; Sections 01 through 04, 09 through 13, 15 and 16 in Township 48, Range 29; and Sections 06 and 07 in Township 48, Range 30.

In Hendry County: Sections 25 through 28 and 32 through 36 in Township 46, Range 31; Sections 30 and 31 in Township 46, Range 32; Sections 06 and 07 in Township 47, Range 32; and Sections 01 through 05, 08 through 10 and 12 in Township 47, Range 31.

Certain sections are only partially located within one mile of a site where CBS has been detected. In these cases, the Administrator considers it necessary to regulate the entire section due to their inseparability for phytosanitary enforcement purposes.

The Administrator has determined that Florida has adopted and is enforcing restrictions on the intrastate movement of the regulated articles that are substantially the same as those imposed by the Administrator on the interstate movement of regulated articles; and that the designation of less than the entire State of Florida as a quarantine area will be sufficient to prevent the interstate spread of CBS.

B. Regulated Articles:

The following are regulated articles and may not be moved interstate from a quarantine area unless they are moved in accordance with this Order:

1. Fruit of *Citrus* spp.
2. All plants and plant parts, including but not limited to leaves for consumption, budwood, and nursery stock of *Citrus* spp.
3. Other articles intended for consumption, as apparel or as a similar personal accessory, or decorative use made from *Citrus* spp.
4. Any other products, articles, or means of conveyance of any character whatsoever, when it is determined by an inspector that they present a hazard of spread of CBS and the person in possession thereof has been provided notice.

C. Conditions for Interstate Movement of Regulated Articles:

1. Regulated fruit from CBS quarantine areas may move interstate under certificate to all States under the following conditions:

- a. Fruit must be washed, brushed, disinfested, treated, and waxed at the packing house, prior to shipment, using an APHIS-approved packing house procedure located on the APHIS website: http://www.aphis.usda.gov/plant_health/plant_pest_info/citrus/black_spot.shtml; and
 - b. Fruit must be practically¹ free of leaves, stems, or other regulated plant material, except that stems less than 1-inch may be attached to fruit but cannot have attached leaves; and
 - c. Fruit must be packed in a packing house operating under a signed compliance agreement with APHIS; and
 - d. Fruit must be accompanied by a certificate issued by an inspector or by persons operating under a compliance agreement; and
 - e. The certificate must be present on both the paperwork accompanying the shipment and on the containers in which the fruit is packed.
2. Regulated fruit from CBS quarantine areas may only move interstate from the packing house under limited permit to noncommercial citrus-producing States under the following conditions:
- a. Fruit must be washed, brushed, and disinfested at the packing house, prior to shipment, using an APHIS-approved packing house procedure located on the APHIS website: http://www.aphis.usda.gov/plant_health/plant_pest_info/citrus/black_spot.shtml; and
 - b. Fruit must be practically² free of leaves, stems or other regulated plant material; except that stems less than 1 inch may be attached to fruit but cannot have attached leaves; and
 - c. Fruit must be packed in a packing house operating under a signed compliance agreement with APHIS; and
 - d. Fruit must be accompanied by a limited permit issued by an inspector or by persons operating under a compliance agreement; and
 - e. The limited permit must be present on both paperwork accompanying the shipment and on the containers in which the fruit is packed.
3. Within a State with a quarantine area, the State may allow citrus fruit to move intrastate from the quarantine area for packing, or for processing into a product other than fresh fruit, under the following conditions:
- a. Growers must operate under a Compliance Agreement that stipulates the following:
 - i. Any fruit that is moved from the quarantine area must be transported in vehicles that meet the following conditions:

¹ Free, except for an occasional leaf or leaves, stems, or other regulated plant material attached to or associated with shipments of regulated fruit. No leaves, stems 1 inch or longer, or branches may be included in shipments for decorative or logistical purposes.

² Same as Footnote 1.

- (1) If the vehicle has solid wall construction on the sides and rear of the cargo area, the cargo area needs only to be covered with a tarpaulin, or otherwise covered on the open top, providing that openings around any tailgates or hinged doors do not exceed $\frac{1}{2}$ inch;
 - (2) If the vehicle has side- and rear-wall construction of wire mesh screen or expanded metal less than or equal to $\frac{3}{4}$ x 1-11/16 inch, it must have the open top of the cargo area covered; or
 - (3) If the vehicle has screen mesh openings greater than $\frac{3}{4}$ x 1-11/16 inch, it must have the cargo area covered completely (to the bed of the vehicle). In addition, if mesh size is greater than $\frac{3}{4}$ x 1-11/16 inch, all modifications made to reduce the mesh size must be done from within the cargo area (e.g., adding steel, fabric or hardware cloth lining).
- ii. Vehicles transporting pallet boxes, field boxes, field bins, etc., must have the cargo area covered with a tarpaulin or otherwise covered in a manner that does not allow any openings greater than $\frac{1}{2}$ inch exposing the fruit. In most cases, this cover will have to extend to below the top of the bottom row of boxes. However, if the pallet boxes or field boxes are stacked in a solid wall with no openings of $\frac{1}{2}$ inch or more on the side or back, only the open tops of the exposed boxes are required to be covered.
 - iii. Covers or tarpaulins may be constructed of any fabric that has a weave of less than $\frac{1}{2}$ inch. In addition, covers must be in good repair and securely fastened or tied down in a manner that will prevent the loss of fruit, leaves, or plant debris while in transit.
 - iv. Identity of each load of fruit must be maintained by issuing an individually numbered trip ticket containing the following information:
 - (1) Name of Grove, Land Owner/agent, Lessee, Harvester
 - (2) License tag number.
 - (3) Number of boxes contained in load (if not bulk)
 - (4) Grove block fruit originated in
 - (5) Processing plant or packinghouse to which fruit is destined
 - (6) Date of harvest
 - (7) The word "TARP" written clearly, preferably at the bottom
 - v. After being emptied and cleaned of plant debris, trailers, field boxes or bins must be disinfected using:
 - (1) A 200-ppm solution of sodium hypochlorite with a pH of 6.0 to 7.5; or
 - (2) A 0.2-percent solution of a quaternary ammonium chloride (QAC) compound; or
 - (3) A solution containing 85 parts per million peroxyacetic acid (PAA) (indoor use only).
- b. Processors receiving whole fruit for juicing and packers receiving whole fruit for packing from the CBS quarantine area must operate under a Compliance Agreement that stipulates the following:
- i. After shipments are emptied at the processing plant or packinghouse, trailers, tarpaulins, field boxes, and field bins must be cleaned of all leaves and other plant

- debris; and
- ii. All leaves and other plant debris resulting from such cleaning must be moved and handled according to Section 4, below; and
 - iii. After being emptied at the processing plant or packinghouse and cleaned of plant debris, trailers, field boxes or bins must be disinfected using:
 - (1) A 200-ppm solution of sodium hypochlorite with a pH of 6.0 to 7.5; or
 - (2) A 0.2-percent solution of a QAC compound; or
 - (3) A solution containing 85 parts per million PAA (indoor use only).
4. Within a State with a CBS quarantine area, the State may allow the intrastate movement of leaves, stems, debris, culled fruit, or other plant material of any citrus plant from a quarantine area if the following conditions are met:
- a. The plant parts must be moved in an enclosed or covered vehicle cargo area. The cargo must be enclosed or covered in a manner so as to have no openings greater than ½ inch exposing the leaves, litter, or other plant material.
 - b. When plant material comes directly in contact with the vehicle, the vehicle must be disinfected following movement.
 - c. Culled fruit may only be moved intrastate for processing or destruction by one of the methods listed below in Section d.
 - d. All leaves and other plant debris cleaned from trailers, tarpaulins, field boxes and field bins must be handled in one of the following methods subject to monitoring by an inspector:
 - (1) Heat treated to at least 180 degrees Fahrenheit for a period of at least one hour
 - (2) Incinerated
 - (3) Buried at a landfill or other disposal site approved site approved by APHIS or the State and covered with dirt at the end of every day that dumping occurs.
 - (4) Fed to livestock as feed.
5. Citrus plants and citrus plant parts, other than fresh fruit handled in accordance with this order, may not be moved interstate from the quarantine area.

C. Definitions:

Certificate: A document, stamp, or other means of identification approved by APHIS and issued by an inspector or person operating under a compliance agreement when he or she finds that, because of certain conditions, a regulated article can be moved safely from a quarantine area.

Commercial Citrus-Producing States: The States of American Samoa, Arizona, California, Florida, Guam, Hawaii, Louisiana, Northern Mariana Islands, Puerto Rico, Texas, and Virgin Islands of the United States.

Compliance Agreement: A written agreement between APHIS or a State and a person engaged in growing, processing, handling, or moving regulated or associated articles, wherein the person agrees to comply with stipulations set forth in the agreement. The compliance agreement may be cancelled orally or in writing by an inspector if the inspector finds that the person who entered

into the compliance agreement has failed to comply with all of the requirements of this Federal Order.

Inspector: Any employee of APHIS, the U.S. Department of Agriculture, or any employee of a State, a County, or any other person specifically authorized by the Administrator to perform the duties required under this Order.

Limited Permit: A document issued by an inspector or person operating under a compliance agreement to allow the interstate movement of regulated articles to a specified destination, for specified handling, processing, or utilization.
