

**Basis for changes to the Pale Cyst Nematode (PCN) Regulated Area
April 27, 2015**

Since the last update to the PCN Regulated Area on April 06, 2015, approximately 4 acres have been released from quarantine under the PCN regulations (7 CFR Part 301, Subpart – Pale Cyst Nematode, §§ 301.86 – 301.86-9).

After further information was provided to the program, approximately 4 acres were released from quarantine upon determination that the field is not at risk for the spread of the PCN from an infested field as there is no association. The field is located in T02S; R36E; Section 12.

This change brings the current quarantine area to 10,316 acres, of which 2,897 acres are infested.
