

**Basis for changes to the Pale Cyst Nematode (PCN) Regulated Area
May 9, 2014**

A ~92-acre Bingham County field was declared PCN-infested on April 29, 2014. The field was already under regulation due to its close association with other PCN infested fields. The field's change in status from 'associated' to 'infested' does not change the size of the regulated area, which remains at a total 8,478 acres. Of that total, the infested acreage is increased from 2,300 to 2,392 acres as a result of the new infested field.
