

**Basis for changes to the Pale Cyst Nematode (PCN) Regulated Area
July 2, 2012**

The following changes have been made to the PCN regulated area since the May 18, 2012 publication:

In accordance with the PCN Rule, subpart 301.86-3(c)(1) *Criteria for designation of fields as infested fields and associated fields - Infested fields*, a 21.9 acre field and a 129.5 acre field in Bingham County, Idaho were confirmed positive for PCN on June 12 and 13, 2012, respectively. Trace work is being done to determine additional acres that will become regulated due to their primary association with these two new infested fields. New associated fields will be posted to the regulated area map in the coming weeks.

These confirmations bring the current total regulated area to 15,316 acres, of which 1,915 acres are infested fields.
