Harmonized Tariff Code Master Correlation Table for APHIS Core Message Set

Last Modified:

The following list of harmonized tariff schedule (HTS) codes are being provided as a courtesy to assist with cross-walking or matching HTS commodities to APHIS' category types and codes.

Category code/description matches against their related HTS code is not absolute or all-encompassing and may be imprecise. In addition, the United States International Trade Commission publishes periodic HTS code updates throughout the year. APHIS takes reasonable steps to stay up to date with these changes. If a HTS code is not found in the list an APHIS Message Set may still be required.
