Spotted Lanternfly

Last Modified:

Spotted lanternfly (*Lycorma delicatula*) is an invasive planthopper that feeds on a wide range of plants, including grapevines, hops, stone fruit trees, and hardwood trees. When the spotted lanternfly feeds, it excretes a sticky, sugary fluid that promotes sooty mold growth, which can further damage plants. Its preferred host is tree-of-heaven (*Ailanthus altissima*), and today 19 States and the District of Columbia have some degree of infestation.

The spotted lanternfly is a hitchhiking pest that is native to Asia. It lays its eggs on any hard surface including grills, vehicles, trailers, firewood, outdoor furniture, bikes and toys. The pest was first detected in 2014 in Pennsylvania. It likely arrived in the United States on goods shipped from overseas.

What To Look For

The spotted lanternfly can harm our fruit and forest industries. Early detection is a critical step to mitigating economic and ecological losses. Residents in spotted lanternfly quarantine areas should check outdoor items before traveling to new areas. [Here's what to look for](#) (2.75 MB):

- **Appearance**

- Adults are roughly 1-inch long and 1/2-inch wide with large, visually striking wings. Adults have brown forewings with black spots at the front and a speckled band at the rear. Their hind wings are scarlet with black spots at the front and white and black bars at the rear. Their abdomen is yellow with black bars.

- **“Honeydew” and Sooty Mold**

- When spotted lanternflies feed on plants, they excrete a sticky, sugary liquid called “honeydew.” This substance leaves behind a shiny, sticky residue that attracts other insects, promotes sooty mold growth, and further harms plants.

- **Eggs**

- Newly laid egg masses (holding 30-50 eggs) resemble wet, gray putty before turning dull and brown, mirroring a smear of cracked mud. The 1-inch long egg masses can be seen in fall, winter, and spring on a variety of smooth surfaces, such as trees, bricks, stones, fences, grills, equipment, and vehicles.

- **Fermented odor**

- As honeydew ferments, it can develop a vinegar-like smell.

- **Tree-of-heaven**

- One of the best places to look for these pests is on a tree-of-heaven, a favorite plant for spotted lanternflies. The tree has a cantaloupe-like texture, with bark that appears light brown to gray. The leaves are large, 1

to 4 feet in length. These leaves are made up of many smaller leaflets on both sides of a central stem.

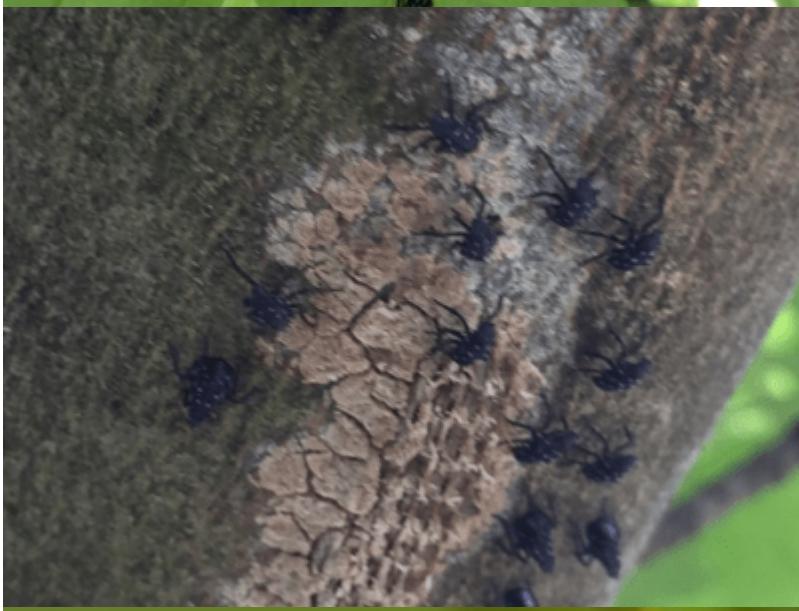

- **Habits**

- Spotted lanternflies (both nymphs and adults) frequently gather in large numbers when feeding. During the day, they can cluster near the base or up in the canopy of a plant, making them more difficult to see.

How To Prevent This Pest

You can stop the spotted lanternfly from overtaking plants:

- **Regular Checks:** Inspect your trees and plants for signs of this pest.
- **Close Car Windows:** Spotted lanternflies and their nymphs can enter vehicles unsuspectedly. When parked, make sure to keep windows closed. If possible, try to park 15 feet away from trees in a quarantine zone.
- **Check Your Vehicle:** Before leaving a parking lot or work site, inspect vehicles for eggs or insects. Check doors, sides, bumpers, wheel wells, grills, and roofs. If found, destroy any eggs or insects you find.
- **Winter Prep:** When preparing for winter, check your outdoor items for egg masses, including items you may bring indoors.
- **Destroy Eggs:** Look for egg masses in your trees (in particular, tree-of-heaven), bricks, stones, and other smooth surfaces. If you find eggs, [smash them](#) (325.72 KB) and scrape them into a plastic zippered bag filled with hand sanitizer or rubbing alcohol to kill them. Then, zip the bag shut and dispose of it in the trash.
- **Know Your Zones:** If you're traveling through a [quarantine area](#), or area known to contain spotted lanternflies, thoroughly check your vehicle and clothes to avoid moving the pest from a quarantine area to your land and other

locations.

- **Inspect Items Being Moved:** If your business involves moving items, check shipping containers, propane tanks, pallets, and other items being stored outdoors before they're moved offsite. Inspect incoming goods for egg masses and insects.

How It Is Treated

Contact your local Cooperative Extension Agent for advice and options to control spotted lanternfly.

Report Plant Pests and Diseases

Have you seen this pest or signs of pest damage? Immediately report your findings.

If you live in a State with existing spotted lanternfly populations, use the dropdown below to look up contact information for your area. For all other States, contact your [State plant regulatory official](#) or [State plant health director](#).

Select a State

Controlling Spotted Lanternfly

[Expand All](#)

Current Status

Spotted lanternfly populations are in 19 States and the [District of Columbia](#): [Connecticut](#), [Delaware](#), [Georgia](#), [Illinois](#), [Indiana](#), [Kentucky](#), [Maryland](#), [Massachusetts](#), [Michigan](#), [New Jersey](#), [New York](#), [North Carolina](#), [Ohio](#), [Pennsylvania](#), [Rhode Island](#), [South Carolina](#), [Tennessee](#), [Virginia](#), and [West Virginia](#). Several States have quarantine areas in place to help stop the pest's spread. Quarantine zones may be expanded if new infestations are detected.

APHIS' Response

We are working with State and Tribal cooperators to detect, control, and manage spotted lanternfly populations in the United States. If allowed to spread, this pest could impact our country's fruit, ornamental, and forest industries. Early detection is critical to prevent economic and ecological losses. The public has played a key role in detecting spotted lanternfly. Stopping its spread depends on help from the public to look for and report signs of the pest.

Downloadable Materials for Businesses

Use the following free materials to alert your team about the spotted lanternfly and how they can help stop it.

- [Poster](#) (10" x 13")—Email to company members and post where truck drivers/delivery personnel can see it.
- [Truck Driver Checklist](#) (8.5" x 11", double-sided, laminate, 3-hole punch on left-hand side)—Ask drivers to refer to the checklist every time before leaving your site.
- [Employee Parking Lot Sign](#) (24" x 18", double-sided, 30" H-stakes)—Post at parking lot exits to remind drivers to check their trucks.
- [Truck Bumper Sticker/Signs](#) (2.74" x 8.25")—Show the public your support of spotted lanternfly control efforts.
- [Window Sign](#) (4" x 4")—Use this in a retail window to show your support.
