Animal Health Status of Regions

Last Modified:

Find information about APHIS-recognized animal health statuses of foreign regions for specific animal diseases, pests, or acceptable commodities below.

APHIS restricts the importation of some animals and animal products due to the animal health status of the exporting or transit region. A region can be any of the following:

- a national entity (country)
- part of a national entity (such as a county, Province, or State)
- parts of several national entities combined into an area
- a group of national entities (countries) combined into a single area

In general, we issue or lift import restrictions through the regulatory process. We then update our lists of APHIS-recognized animal health statuses to reflect changes in those statuses.

Temporary Restrictions

APHIS may administratively impose temporary trade restrictions as outbreaks occur. Below is the list of regions to which temporary restrictions apply for importation of some animals and animal products into the United States.
