Emergency Management Response System for State Incident Management Teams

Last Modified:

Designed for State incident management team (IMT) personnel, this course aims to prepare participants to use the Emergency Management Response System (EMRS) effectively during an incident for disease and resource management.

Topics include EMRS navigation, data retrieval, mapping, and using EMRS2Go. Breakout sessions focus on the use of EMRS by the IMT Logistics, Operations, and Plans sections including Disease Reporting Officers. A scenario-based activity provides the opportunity to practice using EMRS during an incident.
