Single Tier Label Claim (STLC) Industry Guidance

Last Modified:

As part of a movement in 2015 toward single-tier effectiveness statements, 9CFR 112.5(b) was amended to require publication of efficacy and safety study summaries on the APHIS website [Licensed Veterinary Biological Product Information](#). This web page provides details to licensees, permittees, and applicants on preparing and submitting information for those summaries.

A summary of a single study is known herein as an Individual Study Summary (ISS). It is prepared by the licensee and reviewed/edited/cleared by the Center for Veterinary Biologics (CVB) for standard content and appearance. All of the ISSs applicable to a single biological product are then compiled into a Product Compilation Summary (PCS), which is posted to [Licensed Veterinary Biological Product Information](#). The compilation is performed by the CVB.

Scope of Products Affected by Single-Tier

- Vaccines (including prescription platform products), bacterins, toxoids, and immunomodulators are included under the scope of the new rule.
- Products exempted include: antibody products, diagnostic test kits, autogenous, and allergenic extracts.

Scope of Studies Requiring Single-Tier Summaries

[Review this section to determine which of your firm's studies require an Individual Study Summary](#)

Individual Study Summary (ISS) Procedure

Use the ISS template provided by the CVB. Refer to the line-wise instructions provided in the following section for details on how to prepare the ISS. Submit the ISS to CVB as a Microsoft Word document to facilitate editing by CVB. Contact the CVB at CVB.Single.Tier@usda.gov if you do not have access to Microsoft Word software.
