Idaho's Allium/Onion Leafminer Program Recognized by APHIS Under the Federally Recognized State Managed Phytosanitary (FRSMP) Program

[Print](#)

APHIS' Plant Protection and Quarantine (PPQ) gives Federal recognition to the State of Idaho Allium leafminer program under the Federally Recognized State Managed Phytosanitary (FRSMP) program. This is the first State-managed phytosanitary program to be recognized in Idaho.

If Onion leafminer (*Phytomyza gymnostoma* (Loew) Diptera: Agromyzidae) is detected in imported goods, shipments will be prohibited entry to Idaho. The importer has the option to voluntarily treat, re-export, redirect, or destroy the shipment. This is equivalent to restrictions imposed by the State of Idaho when onion leafminer is detected in interstate movement.

Federal recognition of a State-managed phytosanitary program under the FRSMP Program is consistent with U.S. trade policy and fulfills international agreements while promoting safe trade. For further information, go to <http://www.aphis.usda.gov/frsmp>.
