Data Visualization Tools

Last Modified:

As an animal and plant health agency, data visualization tools are critical to our work. We survey for pests and diseases, set quarantine boundaries, and track wildlife hazards, among other tasks that require spatial awareness and dynamic engagement.

Our data visualization tools help us analyze and interpret data, formulate policy, and make operational decisions. This technology also ensures we are more effective in our work, which leads to cost savings, better record keeping, and improved communication internally and externally. This page contains publicly available applications built to support the APHIS mission.

Visit our Geospatial Hub to connect with our experts and learn more about how we're using geospatial tools.
