# APHIS Expands the Citrus Greening (Huanglongbing) Quarantined Area in California

[Print](#)

FOR INFORMATION AND ACTION

DA-2024-48

December 13, 2024

**Subject:** APHIS Expands the Citrus Greening (Huanglongbing) Quarantined Area in California

**To:** State, Tribal, and Territory Agricultural Regulatory Officials

Effective immediately, the USDA's Animal and Plant Health Inspection Service (APHIS), in cooperation with the California Department of Food and Agriculture (CDFA), is expanding the areas quarantined for citrus greening (Huanglongbing; HLB), caused by *Candidatus Liberibacter asiaticus*, in California. APHIS is expanding the quarantined area in the Mission Viejo area of Orange County by approximately 85 square miles. APHIS is taking this action because of citrus greening detections in plant tissue samples collected from residential properties in Los Angeles County. There are approximately 0.4 acres of commercial citrus impacted by this expansion.

APHIS is applying safeguarding measures on the interstate movement of regulated articles from the quarantined areas in California. These measures parallel the intrastate quarantine that CDFA established on November 27, 2024. This action is

necessary to prevent the spread of citrus greening to non-infested areas of the United States.

The specific changes to the quarantined areas in California can be found on the [APHIS Citrus Greening website](#). APHIS will publish a notice of this change in the Federal Register.
