Biotechnology Permits and Notifications

Last Modified:

APHIS regulates the importation, interstate movement, or environmental release (i.e., outdoor field trials) of certain organisms developed using genetic engineering (including plants, insects, and microbes) that may pose a plant pest risk.

Permit applications, which APHIS regulatory scientists carefully review, provide details about the nature of the organism and the conditions that will be used to prevent the spread and establishment of the organism in the environment. A permit may include additional conditions to help prevent unauthorized release into the environment.

A notification is a streamlined alternative to a permit. A modified plant must meet specific eligibility criteria, and the introduction must meet certain pre-defined performance standards.

Letter of No Permit Required

A permit is not required for the importation or interstate movement of most *Drosophila melanogaster* developed using genetic engineering. In these instances, APHIS provides a “Letter of No Permit Required” to facilitate importation these organisms.

- Submit a Request for a "Letter of No Permit Required"

Apply Online

APHIS eFile is the online system for users to apply for and receive import, interstate movement, transit, release permits, and submit required reports.
