

IMPORT HEALTH REQUIREMENTS FOR THE ARAB REPUBLIC OF EGYPT FOR CATTLE EXPORTED FROM THE UNITED STATES

The cattle must be accompanied by U.S. Origin Health Certificate issued by a veterinarian authorized by the U.S. Department of Agriculture (USDA) and endorsed by a Veterinary Services (VS) veterinarian. The certificate must contain the names and addresses of the consignor/exporter, consignee/importer, premises where the animals were raised, and complete identification of the animals. The certificate must also contain the following certification statements and the dates and results of the indicated testing.

CERTIFICATION STATEMENTS:

1. The United States is free of foot and mouth disease, rinderpest, and contagious bovine pleuropneumonia.
2. The United States is recognized by the World Organization for Animal Health (OIE) as a country with controlled risk of bovine spongiform encephalopathy (BSE).
3. The herd of origin has been free of brucellosis and tuberculosis for the 12 months prior to export.
4. The animals were isolated for at least 21 days immediately prior to their movement for export.
5. The animals were inspected within 21 days prior to export and found to be free from clinical evidence of communicable diseases.

TEST REQUIREMENTS:

The cattle must be tested as prescribed below, with negative results.

1. Tuberculosis: Intradermal test using bovine PPD tuberculin.
2. Brucellosis: Complement fixation test at a 1:10 dilution **OR** buffered *Brucella* antigen test (e.g., card test) **OR** ELISA or standard tube **OR** plate agglutination test at a 1:50 dilution.

3. Enzootic bovine leukosis (EBL): Two ELISA tests **OR** agar-gel immunodiffusion (AGID) tests*

*EBL tests must be performed at least 30 days apart with the second test conducted during the pre-export isolation period. *A third EBL ELISA OR AGID test will be conducted after arrival into Egypt.*

4. Bluetongue virus (BTV): Either one PCR test, **OR** Two ELISA tests at least 30 days apart with the second ELISA test conducted during the pre-export isolation period.

OTHER INFORMATION:

Within the 21 days of quarantine prior to export, the animals were inspected and treated for internal and external parasites on with a USDA approved product, listed on the health certificate.

Within 30 days prior to export, the animals were vaccinated on the farm or during quarantine for the following diseases: infectious bovine rhinotracheitis (IBR), bovine viral diarrhea (BVD), para-influenza, clostridial diseases, and leptospirosis.

EXPORT CERTIFICATION:

At the port of embarkation, a VS port veterinarian must attach to the U.S. Origin Health Certificate a completed VS Form 17-37, Certificate of Inspection of Export Animals, showing:

- a. The name and address of the consignor.
- b. The name and address of the consignee.
- c. The number and species of animals to be shipped.
- d. A statement that the animals have been given a careful veterinary inspection at the port of embarkation and found free of evidence of communicable disease and exposure thereto within 24 hours of exportation.

Health Certificate No. _____
(Valid only if the USDA Veterinary
Seal appears over the Certificate No.)

**U.S. ORIGIN HEALTH CERTIFICATE FOR
EXPORT OF CATTLE TO THE ARAB REPUBLIC OF EGYPT
FROM THE UNITED STATES**

I. MINISTRY: United States Department of Agriculture

II. AGENCY: Animal and Plant Health Inspection Service

V. NAME AND ADDRESS OF CONSIGNEE:

VI. TOTAL NUMBER OF CATTLE IN SHIPMENT:

VII. CERTIFICATION STATEMENTS:

1. The United States is free of foot and mouth disease, rinderpest, and contagious bovine pleuropneumonia.
2. The United States is recognized by the World Organization for Animal Health (OIE) as a country with controlled risk of bovine spongiform encephalopathy (BSE).
3. The herd of origin has been free of brucellosis and tuberculosis for the 12 months prior to export.
4. The animals were isolated for at least 21 days immediately prior to their movement for export.
5. The animals were inspected within 21 days prior to export and found to be free from clinical evidence of communicable diseases.

VIII. TEST REQUIREMENTS:

The cattle must be tested with negative results as prescribed below.

**** Mark through any statement or testing option not applicable. ****

1. Tuberculosis: Intradermal test using bovine PPD tuberculin.
Test date(s) _____
2. Brucellosis: Complement fixation test at a 1:10 dilution **OR** buffered *Brucella* antigen test (e.g., card test) **OR** ELISA or standard tube **OR** plate agglutination test at a 1:50 dilution.
Test date(s) _____

3. Enzootic bovine leukosis (EBL) : Two ELISA tests **OR** Agar-gel immunodiffusion (AGID) tests*
** EBL tests must be performed at least 30 days apart with the second test conducted during the pre-export isolation period. A third EBL ELISA OR AGID test will be conducted after arrival into Egypt.*

Test dates _____ & _____

4. Bluetongue virus (BTV): Either one PCR test, **OR** Two ELISA tests at least 30 days apart both with the second test conducted during the pre-export isolation period.

Test date(s) _____ & _____

IX. OTHER INFORMATION:

Within the 21 days of quarantine prior to export, the animals were inspected and treated for internal and external parasites on _____ (date) with _____ (name of the product).

Within 30 days prior to export, the animals were vaccinated on the farm or during quarantine for the following diseases:

Disease	Vaccination date
IBR	_____
BVD	_____
Para-influenza	_____
Clostridial diseases	_____
Leptospirosis	_____

The animals have been given a careful veterinary inspection at the port of embarkation and found free of evidence of communicable disease and exposure thereto within 24 hours of exportation.
